Zumaris Business Plan

CHAPTER 1

EXECUTIVE SUMMARY

1.1 Executive Overview

Zumaris Ltd is a UK-based PropTech and Artificial Intelligence startup developing **Zumaris Home™**, an intelligent cloud platform designed to become the digital operating system for residential properties. The company is addressing one of the largest yet least digitised industries in Europe: residential property ownership and home maintenance.

For most families, purchasing a home represents the single largest financial investment of their lifetime. Yet, despite the value of this asset, homeowners continue to manage repairs, maintenance records, warranties, contractor details, certificates and recurring maintenance through disconnected documents, emails, spreadsheets, calendars and memory.

Unlike modern banking, healthcare and automotive industries, residential properties lack a permanent digital identity capable of preserving their history, predicting future maintenance and providing intelligent decision support.

Zumaris Home aims to solve this problem by creating the first integrated AI-powered Home Operating System that centralises every aspect of residential property ownership.

1.2 The Opportunity

Across the United Kingdom and Europe, millions of residential properties require continuous maintenance, inspections, repairs and upgrades.

Each year homeowners spend billions of pounds on:

- Plumbing
- Electrical repairs
- Roofing
- Painting and decorating
- Renovation
- Gardening

- Cleaning
- Heating systems
- Appliance maintenance
- Emergency repairs

Despite these recurring expenditures, homeowners rarely maintain a structured digital record of the work performed.

Important documents are frequently misplaced.

Maintenance schedules are forgotten.

Contractors change.

Warranty information disappears.

Future buyers inherit little knowledge regarding the property's true condition.

This creates unnecessary costs, operational inefficiencies and reduced confidence throughout the property lifecycle.

Zumaris Home transforms fragmented property information into a continuously evolving digital asset.

1.3 The Problem

Current solutions solve isolated problems rather than property ownership itself.

Marketplaces help users locate service providers.

Scheduling applications manage appointments.

Cloud storage services archive documents.

Calendars create reminders.

None of these solutions establish a permanent, intelligent, verified history for the property itself.

The absence of a unified property record results in:

- Reactive maintenance rather than preventative care.
- Increased repair costs.
- Lower resale confidence.
- Lost documentation.
- Repeated inspections.

- Difficulty tracking warranties.
- Poor coordination between homeowners and service professionals.
- Fragmented service history across multiple contractors.

The home, despite being the largest financial asset for most families, lacks a comprehensive digital memory.

1.4 The Solution

Zumaris Home introduces a new category within the PropTech industry:

AI Property Intelligence Platform

Rather than functioning solely as a marketplace or maintenance application, Zumaris Home becomes the digital infrastructure that connects homeowners, service providers, insurers, estate agents and future property owners around a single trusted property record.

The platform consists of four integrated products.

Home Passport™

Every property receives a permanent digital identity containing:

- Property profile
- Ownership timeline
- Maintenance records
- Repairs
- Renovations
- Warranties
- Safety certificates
- Compliance documents
- Property photographs
- Equipment history

Every event occurring within the property is permanently preserved.

Home Health Score™

An Artificial Intelligence engine continuously evaluates the overall health of every property.

The score reflects:

- Maintenance quality
- Service frequency
- Preventative care
- Age of systems
- Outstanding repairs
- Compliance status
- Warranty coverage
- Historical reliability

The objective is to create an industry-standard measurement similar to a credit score, but for residential property health.

Trades Passport™

Every tradesperson receives a verified professional profile including:

- Business verification
- Insurance information
- Certifications
- Portfolio
- Completed projects
- Customer reviews
- Before and after photographs
- Experience
- Digital credentials

Unlike existing directories, every completed project automatically becomes part of the property's permanent service history, creating transparency for both homeowners and professionals.

AI Website Builder™

Zumaris enables every service provider to create a fully functional professional website without writing code.

Within minutes, plumbers, electricians, painters, builders, gardeners and other professionals can publish a modern website featuring:

- Online booking
- Service catalogue
- Portfolio
- Reviews
- Quote requests
- AI-powered assistant
- SEO optimisation

- Mobile responsiveness

Each website is fully integrated with the Zumaris ecosystem, allowing completed work to be recorded directly within the customer's Home Passport.

1.5 Unique Value Proposition

Zumaris Home is not simply helping homeowners find service providers.

It is creating the digital operating system that manages the complete lifecycle of residential properties.

This approach generates long-term customer relationships while creating recurring data assets that become increasingly valuable over time.

Every maintenance activity enriches the property's digital history.

Every completed project strengthens the Home Health Score.

Every verified professional contributes to a more trusted property ecosystem.

1.6 Business Model

Zumaris will adopt a phased monetisation strategy designed to maximise recurring revenue before expanding into transaction-based income.

Phase One

Subscription Software (SaaS)

Monthly subscription plans for homeowners and landlords providing access to Home Passport™, Home Health Score™ and AI-powered maintenance management.

Phase Two

Professional Subscription Plans

Tradespeople subscribe to advanced business tools including AI Website Builder™, Trades Passport™, CRM functionality and customer management.

Phase Three

Marketplace

Trusted service providers can receive qualified customer leads and bookings through the Zumaris platform.

Revenue is generated through marketplace commissions and premium placement.

Phase Four

Enterprise Services

Future revenue streams include:

- Insurance integrations
- Mortgage partnerships
- Estate agency services
- Property valuation reports
- API licensing
- White-label solutions
- AI property analytics

1.7 Target Market

Initial launch will focus on homeowners within the United Kingdom before expanding across Europe.

Primary customer segments include:

- Homeowners
- Landlords
- Property investors
- Estate agents
- Property management companies
- Home service professionals

Long-term expansion will include insurers, mortgage providers, developers and local authorities.

1.8 Competitive Advantage

Unlike existing platforms that focus exclusively on service marketplaces, Zumaris combines:

- Permanent property records.
- AI-driven predictive maintenance.

- Verified professional identities.
- No-code website creation.
- Digital property health measurement.
- Lifetime service history.
- Secure document management.

This integrated ecosystem creates significant competitive barriers while increasing customer retention through continuously expanding property data.

1.9 Investment Opportunity

Zumaris Ltd is seeking **£250,000** in seed investment to support:

- Product development
- Artificial Intelligence infrastructure
- Mobile application development
- Team expansion
- Customer acquisition
- Marketing
- Regulatory compliance
- Operational growth

The business is designed around scalable recurring revenue with future expansion into marketplace transactions and enterprise partnerships.

1.10 Long-Term Vision

Within the next decade, Zumaris intends to become the trusted digital infrastructure for residential property ownership throughout Europe.

Every home will possess:

- A digital identity.
- A verified maintenance history.
- A Home Health Score™.
- An intelligent maintenance plan.
- A trusted network of professionals.

Every service provider will maintain:

- A verified digital business profile.
- An AI-generated website.
- A portable professional reputation.
- A lifelong portfolio of completed work.

Together these capabilities establish a connected ecosystem where every property becomes smarter, every homeowner becomes more informed, and every service provider becomes more trusted.

1.11 Investment Highlights

- First-mover positioning in the AI Property Intelligence category.
- Hybrid SaaS and Marketplace revenue model.
- Highly scalable cloud-based platform.
- Strong recurring subscription potential.
- Large addressable market across the UK and Europe.
- Multiple future monetisation channels.
- High customer retention through lifetime property records.
- AI-powered differentiation difficult to replicate.
- Clear roadmap from software platform to integrated ecosystem.

1.12 Closing Statement

Zumaris Home is not building another home services application.

It is building the digital infrastructure that will define how residential properties are managed, maintained and transferred for generations to come.

By combining artificial intelligence, verified service history, professional identity, predictive maintenance and digital property records into one unified platform, Zumaris has the opportunity to establish a new global standard for intelligent home ownership.

CHAPTER 2

COMPANY OVERVIEW

Creating the Digital Infrastructure for Every Home

2.1 Introduction

Zumaris Ltd is a UK-based technology company developing a new generation of digital infrastructure for residential property management. The company combines Artificial Intelligence, Property Technology (PropTech), Digital Identity, No-Code Technology, Predictive Analytics and Marketplace Infrastructure into one integrated ecosystem.

Unlike existing home-service platforms that simply connect homeowners with tradespeople, Zumaris is building the operating system that enables every property to maintain its own digital identity throughout its entire lifecycle. Our vision extends beyond maintenance.

We are building the permanent digital memory of every home.

2.2 Company Information

Item	Details
Company Name	Zumaris Ltd
Product Name	Zumaris Home™
Headquarters	London, United Kingdom
Business Type	Private Limited Company
Industry	PropTech + Artificial Intelligence + SaaS
Initial Market	United Kingdom
Expansion	Europe
Business Model	Hybrid SaaS + Marketplace
Funding Stage	Pre-Seed
Funding Target	£250,000

2.3 The Story Behind Zumaris

Every year, millions of homeowners invest significant amounts of money maintaining their homes.

Boilers are serviced.

Roofs are repaired.

Gardens are redesigned.

Walls are painted.

Electrical systems are upgraded.

Bathrooms are renovated.

Yet when the homeowner decides to sell the property five years later, much of this valuable history has disappeared.

Invoices have been misplaced.

Photographs are scattered across different devices.

Warranties have expired without reminders.

Contractors cannot be remembered.

Certificates have been lost.

Maintenance schedules were never recorded.

This creates uncertainty for buyers, frustration for homeowners, and inefficiencies for service providers.

The inspiration behind Zumaris emerged from a simple question:

Why does every car have a service history, while most homes—often worth ten times more—do not?

That single question became the foundation for Zumaris Home.

2.4 Why Zumaris Exists

Modern property ownership has evolved significantly.

Homes are becoming increasingly connected through smart devices, energy monitoring systems, security technology and digital services.

However, the management of these homes remains fragmented.

Today's homeowners typically rely on multiple disconnected tools:

- Email archives
- Paper documents
- Messaging applications
- Cloud storage
- Calendar reminders
- Notes applications
- Personal memory

None of these systems communicate with each other.

None understand the property.

None preserve the property's lifetime story.

Zumaris exists to eliminate this fragmentation.

2.5 Company Vision

To build the world's most trusted digital operating system for residential properties, enabling every home to possess a secure digital identity, an intelligent maintenance history and a measurable health profile throughout its lifetime.

We believe that within the next decade every residential property will have its own digital identity, just as individuals have digital identities and businesses have digital records.

2.6 Company Mission

Our mission is to transform the way people own, maintain and protect residential property by providing an intelligent platform that centralises every aspect of home ownership into one secure ecosystem.

We help homeowners:

- Protect property value.
- Reduce maintenance costs.
- Make informed decisions.
- Preserve complete service history.
- Build long-term confidence in property ownership.

2.7 Our Purpose

The purpose of Zumaris is not simply to digitise home maintenance.

Our purpose is to redefine property ownership.

We envision a future where every residential property maintains an intelligent digital profile that continuously learns, evolves and supports every owner throughout the life of the home.

2.8 Core Beliefs

Zumaris was founded upon six principles.

Every Home Deserves a Digital Identity

A property should possess a permanent digital record that survives changes in ownership.

Every Repair Matters

Every maintenance activity contributes to the long-term health and value of the property.

Prevention Is Better Than Repair

Artificial Intelligence should predict maintenance before failures occur.

Trust Creates Value

Transparent service history increases buyer confidence and strengthens trust between homeowners and professionals.

Simplicity Drives Adoption

Complex technology should feel effortless.

Data Creates Intelligence

Every service performed contributes to improving future recommendations and maintenance planning.

2.9 Strategic Product Ecosystem

Zumaris Home consists of four interconnected products.

Home Passport™

The permanent digital identity of every property.

Includes:

- Property profile
- Ownership timeline
- Maintenance history
- Warranties
- Certificates

- Compliance documents
- Renovation history
- Digital archive

Home Health Score™

An AI-generated score measuring the overall condition of the property.

Factors include:

- Preventative maintenance
- Repair quality
- Building age
- Equipment condition
- Inspection frequency
- Safety compliance
- Outstanding issues

Trades Passport™

A verified professional identity for every service provider.

Each profile contains:

- Business verification
- Qualifications
- Insurance
- Portfolio
- Completed projects
- Reviews
- Certifications
- Experience
- Skills

Every completed project becomes part of the homeowner's permanent property history.

AI Website Builder™

Every tradesperson can create a professional business website without coding.

Features include:

- Booking system
- Online quotations
- Portfolio

- Reviews
- Service catalogue
- AI assistant
- Contact forms
- SEO optimization
- Mobile responsiveness

The website integrates directly with Zumaris Home, automatically updating completed work in the customer's Home Passport.

2.10 Competitive Positioning

Rather than competing directly with marketplaces, Zumaris establishes an entirely new category.

Traditional Platforms

Help people find tradespeople.

Zumaris

Creates the digital operating system that manages the complete lifecycle of every home.

This distinction fundamentally changes the company's long-term strategic position.

2.11 Long-Term Strategic Vision

Our long-term ambition extends far beyond home maintenance.

Future ecosystem integrations include:

- Insurance providers
- Mortgage lenders
- Estate agencies
- Utility companies
- Smart home manufacturers
- Energy providers
- Government compliance systems
- Property valuation services

Each stakeholder interacts with the same trusted property record.

2.12 Business Philosophy

Zumaris follows five guiding principles.

Build Trust Before Transactions

Trust is the foundation of every successful platform.

Data Is a Long-Term Asset

Every property interaction strengthens the platform.

Artificial Intelligence Should Empower Humans

Technology should support better decisions, not replace human expertise.

Simplicity Wins

The platform should remain intuitive for every homeowner regardless of technical ability.

Think Generationally

Homes exist for decades.

The digital record should exist just as long.

2.13 Company Objectives (First Five Years)

Year One

Launch the MVP of Zumaris Home, validate product–market fit with UK homeowners, and establish recurring SaaS revenue through Home Passport™, Home Health Score™ and digital document management.

Year Two

Launch the Trades Passport™ ecosystem and AI Website Builder™. Build the first network of verified professionals and begin integrating completed work into homeowners' digital records. Introduce the first version of the Marketplace.

Year Three

Expand across the UK. Introduce AI-driven predictive maintenance, insurance integrations, and advanced analytics. Establish Home Health Score™ as a recognised property insight tool.

Year Four

Enter selected European markets through partnerships with estate agencies, insurers and property management companies. Localise the platform for regional compliance and languages.

Year Five

Become the leading AI-powered Home Operating System in the UK, with a growing presence across Europe, serving homeowners, landlords, tradespeople and enterprise partners through a unified digital property ecosystem.

2.14 Closing Statement

Zumaris Ltd is building more than a software platform.

It is creating the digital infrastructure that enables every home to preserve its history, understand its condition and intelligently manage its future.

By combining artificial intelligence, verified service providers, no-code digital tools and permanent property records into one ecosystem, Zumaris aims to become the trusted operating system for residential property ownership.

CHAPTER 3

THE PROBLEM & MARKET OPPORTUNITY

Transforming Homeownership Through Digital Intelligence

Executive Insight

Homeownership is one of the most significant financial commitments an individual or family will ever make. Yet, despite the importance and value of residential property, homeowners still rely on fragmented systems, paper records, memory, and disconnected service providers to manage one of their most valuable assets.

The property industry has undergone digital transformation in areas such as buying, selling, and renting. However, the ongoing management of a home after purchase remains largely manual and reactive.

Zumaris Home was created to close this gap by introducing a new digital infrastructure for residential property management.

3.1 The Hidden Problem

For most homeowners, managing a home is a continuous process rather than a one-time event.

Every property requires regular maintenance, inspections, repairs, upgrades, and compliance throughout its lifetime.

However, homeowners typically face a recurring set of challenges:

- Documents are stored in multiple locations.
- Maintenance records are incomplete or missing.
- Different contractors keep their own records.
- Homeowners forget when systems require servicing.
- Emergency repairs occur because preventative maintenance is neglected.
- Property history is lost when ownership changes.
- Buyers have limited visibility into how well a property has been maintained.

These issues increase costs, reduce trust, and make property ownership unnecessarily complex.

3.2 Current Reality

Today, homeowners often use:

- Email for invoices.
- WhatsApp to communicate with tradespeople.
- Google Drive or Dropbox for documents.
- Paper folders for certificates.
- Calendar reminders for maintenance.
- Notes applications for contractor information.
- Memory to remember warranty dates.

None of these systems communicate with one another.

There is no single source of truth for the property.

3.3 The Cost of Fragmentation

The absence of a unified digital property record has significant consequences.

Financial Impact

- Unexpected repair costs due to missed maintenance.
- Reduced resale value caused by missing documentation.
- Duplicate inspections.
- Invalid warranties because servicing requirements were not met.

Operational Impact

- Time spent searching for invoices and certificates.
- Difficulty comparing previous work.
- Lack of transparency regarding contractors.

Emotional Impact

- Stress during emergencies.
- Uncertainty when purchasing or selling property.
- Reduced confidence in maintenance decisions.

3.4 Existing Solutions and Their Limitations

Several well-known platforms operate within the home services sector.

However, each addresses only a small part of the homeowner journey.

Platform	Primary Function	Limitation
Checkatrade	Find trusted tradespeople	Does not retain a permanent property history.
Taskrabbit	Book local services	Focuses on tasks rather than property lifecycle management.
MyBuilder	Receive quotations	No long-term property intelligence.
Rated People	Generate service leads	No property-centric data model.
Calendar Apps	Reminders	No understanding of property context.

None of these platforms provide an integrated digital identity for the home.

3.5 The Industry Gap

Through our analysis, we identified four critical gaps in the current market.

Gap 1 — No Permanent Home Identity

Homes do not have a lifelong digital profile that remains with the property across multiple owners.

Gap 2 — No Verified Service History

Every contractor maintains separate records.

The property itself maintains none.

Gap 3 — No Property Intelligence

Current platforms store information.

They do not analyse it.

Artificial Intelligence has not yet been applied to generate meaningful insights regarding property condition.

Gap 4 — No Digital Infrastructure for Trades

Tradespeople frequently operate without:

- Professional websites.
- Digital portfolios.
- Verified work histories.
- Integrated customer records.

This limits trust and digital growth.

3.6 The Market Opportunity

The digital transformation of residential property management is still in its early stages.

Several long-term trends are creating a significant market opportunity:

- Increasing homeownership expectations.
- Rising maintenance costs.
- Growth in smart home technologies.
- Expansion of artificial intelligence.
- Greater demand for trusted service providers.
- Increasing use of digital documentation.

- Regulatory emphasis on safety and compliance.
- Consumer preference for subscription-based digital services.

Together, these trends create favourable conditions for a platform that combines software, data, AI, and trusted service networks.

3.7 Our Market Thesis

Zumaris believes the future of property ownership will be driven by intelligent data rather than isolated transactions.

The company is built upon three strategic assumptions:

Assumption One

Every home will eventually require a permanent digital identity.

Assumption Two

Artificial Intelligence will become essential for preventative maintenance and long-term asset management.

Assumption Three

Verified digital records will become increasingly valuable for homeowners, buyers, insurers, lenders, and estate agents.

If these assumptions hold true, the demand for an integrated Home Operating System will continue to grow.

3.8 Why Now?

Several factors make this the right time to launch Zumaris Home:

- Cloud infrastructure has become affordable and highly scalable.
- AI technologies are now capable of delivering practical homeowner insights.
- Homeowners increasingly expect digital experiences across all aspects of life.
- Tradespeople are seeking affordable digital tools to grow their businesses.
- The UK PropTech ecosystem is mature enough to support partnerships and adoption.

The convergence of these factors creates a unique window of opportunity.

3.9 Our Strategic Response

Zumaris addresses these market gaps through four integrated solutions:

Home Passport™

A permanent digital identity and record for every property.

Home Health Score™

AI-powered assessment of property condition and maintenance quality.

Trades Passport™

Verified digital identity and portfolio for service professionals.

AI Website Builder™

No-code website generation enabling tradespeople to establish a professional online presence within minutes.

Together, these products create a connected ecosystem rather than a standalone application.

3.10 Beyond the Marketplace

Most platforms generate value only when a transaction occurs.

Zumaris generates value every day, even when no services are booked.

Each maintenance reminder, uploaded document, completed repair, AI recommendation, and verified service enriches the property's digital history.

This creates long-term customer engagement and recurring subscription value.

3.11 Strategic Opportunity

The long-term opportunity extends beyond homeowners.

The same infrastructure can support:

- Landlords.
- Estate agents.

- Property management companies.
- Mortgage lenders.
- Insurance providers.
- Surveyors.
- Smart home manufacturers.
- Government compliance programmes.

By positioning itself as the trusted data layer for residential property, Zumaris can evolve into a foundational platform within the PropTech ecosystem.

3.12 Chapter Summary

The residential property industry suffers from fragmented information, reactive maintenance, and limited digital infrastructure.

Existing platforms solve isolated problems but fail to provide a unified, intelligent system for managing the complete lifecycle of a home.

Zumaris Home addresses this challenge by introducing an integrated platform that combines digital identity, verified service history, artificial intelligence, and professional service tools into a single ecosystem.

This positions the company to create a new category within the PropTech market while addressing a significant unmet need across homeowners and service professionals.

Key Investor Takeaways

- A clear, persistent problem exists across the residential property lifecycle.
- Current competitors solve individual tasks rather than the underlying problem.
- The convergence of AI, cloud technology, and digital adoption creates a favourable market environment.
- Zumaris differentiates itself by creating a **property-centric ecosystem** instead of a transaction-focused marketplace.
- The platform has the potential to become critical digital infrastructure for multiple stakeholders within the housing ecosystem.

CHAPTER 4

INDUSTRY ANALYSIS

The Future of Residential Property Intelligence

Executive Insight

The residential property industry is undergoing one of its largest digital transformations in history. While significant innovation has occurred in property search, buying, selling and mortgage technology, the ongoing management of residential properties remains fragmented and underserved.

Consumers increasingly expect digital experiences that provide transparency, automation, predictive insights and seamless service delivery. At the same time, advancements in Artificial Intelligence, cloud computing and mobile technologies are creating opportunities to redefine how residential properties are managed throughout their lifecycle.

Zumaris Home is positioned at the intersection of several rapidly growing industries:

- Property Technology (PropTech)
- Artificial Intelligence
- Home Services
- SaaS
- Digital Identity
- Predictive Maintenance
- No-Code Platforms

This convergence creates a unique opportunity to establish a new category: **AI Property Intelligence**.

4.1 Industry Overview

The property sector has traditionally focused on four major stages:

- Buying
- Selling
- Renting
- Financing

However, once a homeowner moves into a property, digital innovation declines significantly.

The "ownership phase" remains largely unmanaged by modern software platforms.

Homeowners continue to rely on manual processes to coordinate maintenance, repairs, warranties and contractor relationships.

Zumaris Home focuses specifically on this underserved stage of the property lifecycle.

4.2 The Digital Transformation of Homeownership

Several global trends are reshaping homeowner expectations:

Smart Homes

Homes increasingly contain connected devices such as:

- Smart thermostats
- Smart locks
- CCTV systems
- Solar panels
- Electric vehicle chargers
- Smart appliances

These technologies generate valuable data but are rarely integrated into a unified management platform.

AI Adoption

Artificial Intelligence is rapidly becoming a standard component of consumer software.

Homeowners increasingly expect intelligent recommendations rather than simple record storage.

AI enables:

- Predictive maintenance
- Cost forecasting
- Equipment lifespan estimation
- Document analysis
- Risk identification

Subscription Economy

Consumers are increasingly comfortable paying monthly subscriptions for services that deliver ongoing value.

Examples include:

- Netflix
- Spotify
- Microsoft 365
- Ring Protect
- Adobe Creative Cloud

Zumaris adopts the same recurring revenue model for residential property management.

Digital Documentation

Paper documentation is rapidly disappearing.

Governments, insurers and service providers increasingly issue digital certificates, invoices and warranties.

However, homeowners still lack a central repository designed specifically for residential property.

4.3 PropTech Industry Evolution

The PropTech sector has evolved through several generations.

Generation One

Property Listings

Examples:

Rightmove

Zoopla

Generation Two

Transactions

Mortgage

Conveyancing

Online Estate Agents

Generation Three

Smart Buildings

IoT

Energy Monitoring

Automation

Generation Four

AI Property Intelligence

This is where Zumaris positions itself.

Rather than digitising transactions, Zumaris digitises ownership itself.

4.4 Home Services Industry Challenges

The home services industry remains highly fragmented.

Thousands of independent professionals operate as sole traders or small businesses.

Many lack:

- Professional websites
- CRM systems
- Online booking
- Customer history
- Marketing automation
- Digital branding

Zumaris addresses these challenges through Trades Passport™ and AI Website Builder™, enabling professionals to modernise their businesses while becoming part of a trusted ecosystem.

4.5 Emerging Customer Expectations

Today's homeowners increasingly expect:

- Transparency
- Convenience
- Mobile-first experiences
- Secure document storage
- Predictive insights
- Verified professionals
- Digital communication
- Instant access to information

Traditional platforms often fail to meet these expectations because they focus on isolated transactions rather than ongoing relationships.

4.6 Regulatory and Compliance Trends

Governments and regulatory bodies are placing greater emphasis on:

- Building safety
- Energy efficiency
- Digital documentation
- Compliance records
- Consumer protection

These trends increase demand for platforms capable of securely managing property-related documentation and compliance throughout a property's lifecycle.

4.7 Technology Trends Supporting Zumaris

The following technologies strengthen the long-term viability of the Zumaris platform:

Artificial Intelligence

Supports predictive maintenance, document analysis and personalised recommendations.

Cloud Computing

Provides scalable and secure infrastructure for storing lifetime property records.

Mobile Technology

Enables homeowners and tradespeople to access information anywhere.

API Economy

Allows integration with insurers, mortgage providers, estate agents and smart home devices.

No-Code Technology

Enables rapid digital adoption among small businesses and independent tradespeople.

4.8 Industry Gaps

Despite advances in PropTech, several critical gaps remain:

- No permanent digital identity for homes.
- No universal property service history.
- No AI-generated home health assessment.
- No integrated platform connecting homeowners and tradespeople through shared records.

- Limited digital tools for small home service businesses.

Zumaris directly addresses each of these gaps.

4.9 Industry Risks

Like any emerging market, the sector presents challenges:

- Slow customer adoption.
- Data privacy concerns.
- Competition from large technology companies.
- Regulatory changes.
- Dependence on trust and security.

Zumaris mitigates these risks through:

- GDPR compliance.
- Strong cybersecurity.
- Phased product rollout.
- Subscription-first model.
- Continuous innovation.

4.10 Why This Market Is Ready

Several factors indicate that the market is entering a period of accelerated digital transformation:

- Homeowners increasingly expect digital convenience.
- AI technologies have reached commercial maturity.
- Tradespeople seek affordable digital business tools.
- Governments encourage digital documentation.
- Cloud infrastructure reduces operating costs.
- Mobile adoption continues to grow.

These conditions create a favourable environment for Zumaris Home.

4.11 Strategic Industry Position

Rather than competing directly with traditional marketplaces, Zumaris occupies a unique strategic position.

Traditional Marketplace	**Zumaris Home**
Connects customers with tradespeople	Builds a lifelong digital identity for every home

Traditional Marketplace	Zumaris Home
Transaction-focused	Lifecycle-focused
Revenue from bookings	Recurring SaaS + Marketplace + AI Services
Limited customer interaction	Daily homeowner engagement
Temporary relationships	Lifetime customer relationships

This positioning creates higher customer retention and multiple long-term revenue opportunities.

4.12 Industry Outlook

Over the next decade, residential property management is expected to become increasingly data-driven.

Artificial Intelligence will move from reactive assistance to proactive decision-making.

Homeowners will increasingly rely on digital platforms to:

- Protect property value.
- Reduce maintenance costs.
- Improve energy efficiency.
- Simplify compliance.
- Coordinate trusted professionals.

Zumaris aims to become the platform enabling this transition.

4.13 Chapter Summary

The residential property sector is entering a period of rapid digital transformation, driven by advances in Artificial Intelligence, cloud computing, mobile technologies and changing consumer expectations.

While many companies have digitised the processes of buying, selling and renting properties, the ongoing management of homes remains fragmented.

Zumaris Home addresses this opportunity by creating an AI-powered platform that combines digital identity, predictive maintenance, verified service providers and intelligent business tools into a unified ecosystem.

This strategic positioning enables the company to create a new category within the PropTech industry while establishing long-term recurring customer relationships.

Key Investor Takeaways

- The market is supported by strong long-term digitalisation trends.
- Multiple industries converge to create a unique opportunity for Zumaris.
- Existing solutions address isolated problems rather than the full property lifecycle.
- AI, SaaS and no-code technologies strengthen the platform's scalability.
- Zumaris is positioned to become a foundational layer in the future residential property ecosystem.

CHAPTER 5

MARKET ANALYSIS & MARKET SIZE

Understanding the Opportunity

Executive Insight

Zumaris Home is positioned at the intersection of multiple high-growth industries rather than relying on a single market.

Instead of defining itself solely as a home services platform or property management application, Zumaris combines several expanding sectors into one integrated ecosystem.

This diversified positioning significantly increases the company's Total Addressable Market (TAM) while creating multiple independent revenue streams.

5.1 Market Definition

Zumaris operates across six complementary markets.

Industry	Role in Zumaris
PropTech	Digital Property Platform

Industry	Role in Zumaris
Home Services	Marketplace
SaaS	Subscription Software
Artificial Intelligence	Predictive Intelligence
No-Code Platforms	AI Website Builder
Digital Documentation	Home Passport

Together these industries create a unique market category called:

AI Property Intelligence Platform

5.2 Market Drivers

Several macroeconomic and technological trends are driving demand for platforms such as Zumaris.

Rising Homeownership Expectations

Modern homeowners increasingly expect digital experiences comparable to online banking and healthcare.

Increasing Maintenance Costs

Repair costs continue to rise.

Preventative maintenance is becoming economically attractive.

Digital Transformation

Consumers increasingly expect:

- Mobile Apps
- Cloud Storage
- AI Recommendations
- Automation
- Online Booking

Trust Economy

Consumers increasingly prefer verified professionals over anonymous marketplaces.

Artificial Intelligence

AI is changing every industry.

Property management remains one of the least disrupted.

5.3 Target Customer Segments

Zumaris serves two primary customer groups.

Homeowners

Needs:

- Organised property documents
- Trusted tradespeople
- Maintenance reminders
- Home Health Score™
- Property Timeline™

Pain Points:

- Lost paperwork
- Expensive repairs
- Forgotten maintenance
- No property history

Tradespeople

Needs:

- Customers
- Professional website
- Online booking
- Reviews
- Portfolio
- CRM

Pain Points:

- Expensive marketing
- Weak online presence
- Low digital skills
- Customer acquisition

Future customers include:

- Estate Agents
- Landlords
- Property Managers
- Mortgage Companies
- Insurance Providers

5.4 Total Addressable Market (TAM)

The UK residential property market includes millions of privately owned homes.

Rather than limiting itself to one service category, Zumaris addresses homeowners across all maintenance and property management activities.

Potential customers include:

- Owner-occupied homes
- Buy-to-let landlords
- Property investors
- Small property management businesses

The broader European expansion further multiplies this opportunity.

From a revenue perspective, the platform can generate income from:

- SaaS subscriptions
- Marketplace commissions
- AI services
- Digital websites
- Enterprise partnerships

This creates a substantially larger opportunity than a traditional home services marketplace.

5.5 Serviceable Available Market (SAM)

The initial focus is deliberately narrow.

Geographic Scope

United Kingdom

Initially:

Greater London

Then:

England

Then:

Scotland

Then:

Wales

Then:

Europe

Customer Focus

Digitally engaged homeowners.

Age:

30-60

Own property.

Use smartphones.

Comfortable with subscriptions.

Already hire professionals.

Trades:

Independent businesses.

1-20 employees.

Need digital growth.

5.6 Serviceable Obtainable Market (SOM)

During the first five years, Zumaris will focus on capturing a realistic share of the UK homeowner and tradesperson market.

Rather than attempting nationwide adoption immediately, the company will build regional density before expanding geographically.

Success will be measured by:

- Active homeowners.
- Verified tradespeople.
- Monthly recurring revenue.
- Customer retention.
- Home Health Scores generated.
- Property records created.

5.7 Market Trends

Several structural trends support long-term growth.

AI Everywhere

Consumers increasingly expect intelligent recommendations.

Subscription Economy

Monthly subscriptions continue growing across industries.

Smart Homes

Connected devices continue expanding.

ESG

Homeowners increasingly care about:

Energy

Efficiency

Carbon

Maintenance

Digital Identity

Everything is becoming digital.

Homes remain largely offline.

5.8 Market Timing

Why now?

Five reasons.

AI has matured.

Cloud costs are lower.

Homeowners trust digital platforms.

Tradespeople need digital tools.

Property management remains fragmented.

5.9 Market Validation

Current competitors prove demand already exists.

Millions of homeowners already use:

Checkatrade

Taskrabbit

Rated People

MyBuilder

TrustATrader

Houzz

This validates consumer willingness to use digital platforms for home-related services.

Zumaris extends this demand into a much broader ecosystem.

5.10 Future Expansion Markets

Beyond residential homes.

Future opportunities include:

Holiday Homes

Commercial Buildings

Student Accommodation

Social Housing

Property Developers

Facility Management

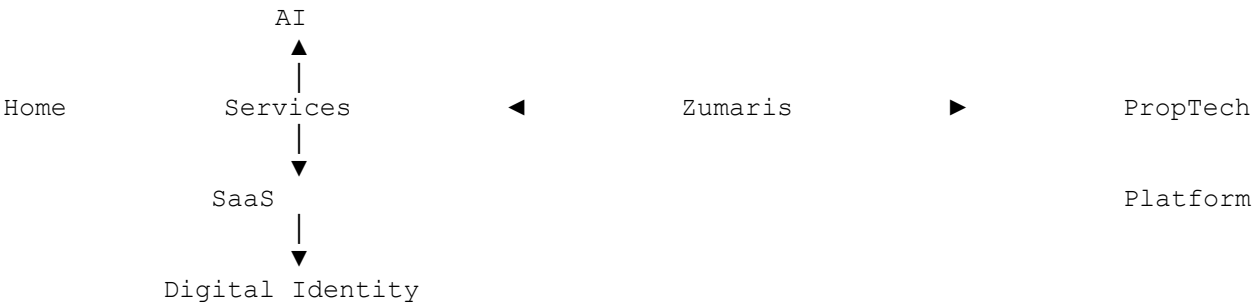

Housing Associations

Government Housing

5.11 Strategic Position

Rather than competing within one market,

Zumaris sits above multiple industries.

This creates significant long-term strategic flexibility.

5.12 Growth Potential

Future products may include:

Insurance Score

Mortgage Insights

Energy Optimisation

AI Cost Estimation

Home Valuation

Renovation Planning

Contractor Financing

Material Marketplace

Digital Building Logbook

Property Digital Twin™

These products can be introduced without changing the platform's core architecture.

5.13 Why This Market Matters

Unlike many consumer applications, homes are permanent assets.

Every property requires ongoing maintenance.

Every homeowner needs records.

Every repair generates data.

Every document creates value.

This creates a recurring need rather than occasional usage.

5.14 Chapter Summary

Zumaris addresses a large and expanding market driven by digital transformation, increasing maintenance costs, artificial intelligence, and changing homeowner expectations.

By operating across multiple complementary industries, the company benefits from diversified revenue opportunities while maintaining a focused customer experience.

Its phased expansion strategy—from homeowners to tradespeople, and later to insurers, lenders, and enterprise partners—supports sustainable long-term growth.

Key Investor Takeaways

- Zumaris serves multiple high-growth markets through a single integrated platform.
- The phased geographic and customer expansion strategy reduces execution risk.
- Existing competitors validate demand but do not address the full property lifecycle.
- Multiple revenue streams increase resilience and scalability.
- Long-term opportunities extend well beyond homeowners into enterprise partnerships.

CHAPTER 6

COMPETITOR ANALYSIS & COMPETITIVE POSITIONING

Why Zumaris Will Create a New Market Category

Executive Insight

The residential property technology market is highly fragmented. Numerous companies solve individual problems such as finding tradespeople, storing documents, booking appointments, or managing property portfolios.

However, no single platform currently provides an integrated digital operating system for homeowners that combines lifetime property records, AI-powered insights, verified service professionals, and digital business tools.

Rather than competing feature-for-feature with existing companies, Zumaris is creating an entirely new category: **AI Property Intelligence Platform**.

This chapter analyses the competitive landscape, identifies market gaps, and demonstrates why Zumaris is uniquely positioned to lead this emerging category.

6.1 Competitive Landscape

The market consists of several categories of competitors.

Category	**Examples**	**Core Function**
Trade Marketplaces	Checkatrade, Rated People, MyBuilder, TrustATrader	Connect homeowners with tradespeople
On-demand Services	Taskrabbit	Book local tasks and services
Home Design Platforms	Houzz	Inspiration and professionals
Property Management	Arthur, Landlord Vision	Rental property management
Cloud Storage	Google Drive, Dropbox	Store documents
Website Builders	Wix, Squarespace	Create business websites
CRM for Trades	Jobber, Housecall Pro	Manage customers and jobs

Each solves one problem well, but none provide an end-to-end operating system for homeownership.

6.2 Analysis of Major Competitors

Checkatrade

Strengths

- Strong brand recognition in the UK
- Large network of verified tradespeople

- Consumer trust built over many years

Weaknesses

- Focused only on finding tradespeople
- No lifetime property history
- No AI capabilities
- No homeowner subscription model
- No digital identity for homes

Rated People

Strengths

- Lead generation for professionals
- Large user base

Weaknesses

- Transaction-focused
- No ongoing homeowner engagement
- No document management
- No predictive maintenance

MyBuilder

Strengths

- Competitive quotation process
- Well-known marketplace

Weaknesses

- Focus on quotes rather than long-term property management
- Limited post-project engagement

Taskrabbit

Strengths

- Fast booking process
- Strong mobile experience

Weaknesses

- General task marketplace
- No property intelligence
- No service history
- No tradesperson business tools

Housecall Pro

Strengths

- Excellent CRM for service businesses
- Scheduling and invoicing

Weaknesses

- Designed for businesses, not homeowners
- No shared property history
- No marketplace

Wix / Squarespace

Strengths

- Easy website creation
- Strong templates

Weaknesses

- Generic website builders
- No integration with home services
- No booking ecosystem
- No property data

6.3 Competitive Comparison Matrix

Capability	Zumaris	Checkatrade	Taskrabbit	Houzz	Wix
Home Passport™	☑	✗	✗	✗	✗
Lifetime Property History	☑	✗	✗	✗	✗
Home Health Score™	☑	✗	✗	✗	✗
Trades Passport™	☑	Limited	✗	Limited	✗
AI Website Builder™	☑	✗	✗	✗	☑ (Generic)
Marketplace	Year 2	☑	☑	Partial	✗
AI Maintenance	☑	✗	✗	✗	✗
Digital Twin (Roadmap)	☑	✗	✗	✗	✗
Secure Document Vault	☑	✗	✗	✗	✗
Property Timeline™	☑	✗	✗	✗	✗

6.4 Why Existing Platforms Cannot Easily Copy Zumaris

Although large competitors may introduce similar features, replicating the Zumaris ecosystem would require a fundamental redesign of their business models.

Zumaris is built around the **property as the central asset**, whereas most competitors are built around **transactions** or **service providers**.

Key barriers include:

- Deep integration between Home Passport™, Trades Passport™, and Home Health Score™.
- Longitudinal property data that grows more valuable over time.
- AI models trained on structured property maintenance data.
- Dual-sided network effects between homeowners and tradespeople.
- Integrated no-code website builder linked directly to verified work history.

These elements create a defensible competitive moat.

6.5 Our Competitive Advantages

Property-Centric Model

The home—not the transaction—is the centre of the ecosystem.

Continuous Engagement

Users interact with Zumaris throughout the year, not only when they need a repair.

Recurring Revenue

Subscriptions create predictable cash flow before marketplace commissions become significant.

AI-Driven Intelligence

Recommendations become smarter as more maintenance data is collected.

Digital Identity

Every home and every tradesperson has a verified, evolving digital profile.

Ecosystem Synergy

Each product strengthens the others:

- Homeowners attract tradespeople.
- Tradespeople attract homeowners.
- Every completed job enriches the property's data.
- Better data improves AI recommendations.

6.6 Blue Ocean Strategy

Rather than competing directly within the crowded marketplace segment, Zumaris creates a **Blue Ocean** by combining multiple industries into one integrated platform.

Existing Market	**Zumaris Strategy**
Marketplace	Home Operating System
Lead Generation	Lifetime Customer Relationship

Existing Market	Zumaris Strategy
Static Records	Intelligent Property Memory
Reviews	Data-Driven Trust Score™
Website Builder	AI Website Builder™ connected to property records

This approach shifts competition away from price and towards long-term value creation.

6.7 Network Effects

Zumaris benefits from powerful network effects:

1. More homeowners attract more tradespeople.
2. More tradespeople improve marketplace quality.
3. More completed jobs generate richer property data.
4. Richer data improves AI insights.
5. Better AI increases customer retention.
6. Higher retention attracts enterprise partners.

This self-reinforcing cycle strengthens the platform over time.

6.8 Switching Costs

Once a homeowner has stored years of maintenance history, warranties, certificates, and property data in Zumaris, switching to another platform becomes increasingly difficult.

Similarly, tradespeople who build their digital reputation, customer base, and website within Zumaris gain strong incentives to remain on the platform.

These switching costs contribute to long-term customer retention.

6.9 Strategic Positioning Statement

Zumaris is not competing to become the biggest home services marketplace.

Instead, the company aims to become the **trusted digital infrastructure for residential property ownership**, enabling every stakeholder to interact through a shared, intelligent property record.

This strategic positioning differentiates Zumaris from both traditional marketplaces and generic software providers.

6.10 Chapter Summary

The competitive landscape confirms that no existing platform currently combines permanent property records, AI-driven maintenance intelligence, verified professional identities, and integrated digital business tools into one ecosystem.

By positioning itself as the operating system for residential properties rather than another marketplace, Zumaris establishes a defensible market position with multiple competitive advantages and strong long-term network effects.

Key Investor Takeaways

- Existing competitors solve isolated problems rather than the full property lifecycle.
- Zumaris differentiates itself through an integrated, property-centric ecosystem.
- Long-term data accumulation creates a defensible competitive moat.
- Network effects strengthen the platform as adoption grows.
- The Blue Ocean positioning reduces direct competition and supports premium valuation.

CHAPTER 7

PESTLE ANALYSIS

External Environment Assessment for Zumaris Home™

Executive Insight

The success of Zumaris Home depends not only on its technology and execution but also on external environmental factors that influence customer adoption, regulation, technological progress and market dynamics.

A comprehensive PESTLE analysis helps identify the macro-environmental forces that may create opportunities or risks for the business over the next decade.

As Zumaris expands from the United Kingdom into Europe, understanding these external factors will be critical to building a resilient and scalable organisation.

7.1 What is PESTLE Analysis?

PESTLE is a strategic framework used to evaluate six external factors that influence an organisation:

- Political
- Economic
- Social
- Technological
- Legal
- Environmental

For Zumaris, these dimensions are particularly relevant because the platform operates across PropTech, Artificial Intelligence, SaaS, Digital Identity and Home Services.

7.2 Political Factors

Government policy increasingly encourages the digitalisation of public and private services.

Across the UK and Europe, governments are investing in:

- Smart cities
- Digital infrastructure
- Housing quality
- Building safety
- Energy efficiency
- Net Zero initiatives
- Consumer protection

These policies create favourable conditions for platforms that improve transparency and maintenance standards.

Opportunities

- Digital housing initiatives
- Smart city programmes
- Government support for innovation
- Startup funding schemes
- Innovator Founder Visa
- AI adoption strategies

Risks

- Changes in housing policy

- Tax reforms
- Planning regulations
- Brexit-related regulatory divergence
- Public procurement complexity

7.3 Economic Factors

Residential property remains one of the largest asset classes in the UK and Europe.

However, homeowners face increasing financial pressures due to:

- Inflation
- Rising labour costs
- Higher material prices
- Increased insurance premiums
- Mortgage affordability challenges

These factors encourage homeowners to maintain properties more proactively to avoid expensive emergency repairs.

Opportunities

- Subscription services reduce unexpected maintenance costs.
- Preventative maintenance becomes more attractive.
- Tradespeople seek affordable digital tools instead of expensive advertising.

Risks

- Economic downturn reducing discretionary spending.
- Lower consumer confidence.
- Reduced renovation activity during recessions.

7.4 Social Factors

Consumer behaviour has changed dramatically over the past decade.

People increasingly expect:

- Mobile-first experiences
- Digital records
- Verified reviews
- Transparency
- Personalisation
- Instant communication

Trust has become one of the most valuable assets in digital platforms.

Zumaris responds by creating verified identities for both properties and professionals.

Social Trends Supporting Zumaris

- Increasing digital literacy.
- Growing adoption of smartphones.
- Greater willingness to pay for convenience.
- Higher expectations of transparency.
- Demand for trusted professionals.

Challenges

- Older homeowners may require education and onboarding support.
- Building trust for long-term document storage.

7.5 Technological Factors

Technology is the strongest external driver supporting Zumaris.

Several emerging technologies directly enhance the platform's capabilities.

Artificial Intelligence

AI enables:

- Predictive maintenance
- Intelligent document analysis
- Cost estimation
- Maintenance recommendations
- Equipment lifespan forecasting

Cloud Computing

Provides scalable infrastructure for lifetime property records.

Mobile Technology

Allows homeowners and tradespeople to manage their businesses anywhere.

Internet of Things (IoT)

Future integration opportunities include:

- Smart thermostats
- Leak detectors
- Smoke alarms
- Smart meters
- Security systems
- Energy monitoring devices

API Ecosystem

Open APIs enable integrations with:

- Insurance providers
- Mortgage lenders
- Estate agents
- Smart home devices
- Local authorities

Future Technologies

Roadmap opportunities include:

- Digital Twin technology
- Augmented Reality property inspections
- Voice AI assistants
- Computer Vision for defect detection
- Generative AI property reports

7.6 Legal Factors

Legal compliance is essential because Zumaris stores sensitive customer information.

The company must comply with:

- UK GDPR
- Data Protection Act 2018
- Consumer Rights Act
- Electronic Communications Regulations
- Intellectual Property Law
- Employment Law
- Marketplace regulations

Data Security

The platform must ensure:

- Encryption
- Secure authentication
- Multi-factor authentication
- Role-based permissions
- Secure backups

Intellectual Property

Zumaris intends to protect:

- Home Passport™
- Home Health Score™
- Trades Passport™
- Property Timeline™
- AI Website Builder™
- Home DNA™
- Trust Score™

through trademarks and proprietary software.

7.7 Environmental Factors

Environmental sustainability is becoming increasingly important.

Governments and consumers are prioritising:

- Energy efficiency
- Carbon reduction
- Sustainable maintenance
- Circular economy
- Responsible renovations

Zumaris can contribute by encouraging preventative maintenance that extends the lifespan of home systems and reduces unnecessary waste.

Future Sustainability Features

- Energy consumption insights.
- Carbon footprint estimation.
- Sustainable material recommendations.
- Green contractor badges.
- ESG reporting for landlords.

7.8 PESTLE Summary Matrix

Factor	Opportunity	Risk	Strategic Response
Political	Digital housing initiatives	Regulatory changes	Continuous compliance monitoring
Economic	Demand for cost-saving maintenance	Recession	Affordable subscription pricing
Social	Digital adoption and trust	Resistance from less tech-savvy users	Simple UX and customer education
Technological	AI, IoT, Cloud	Rapid technological change	Continuous R&D investment
Legal	Strong data governance builds trust	GDPR penalties	Security-by-design architecture
Environmental	Sustainability trends	Increasing environmental regulation	Green features and preventative maintenance

7.9 Strategic Implications

The external environment is broadly favourable for Zumaris.

Key long-term trends—including digital transformation, AI adoption, property technology innovation, and sustainability—align closely with the company's vision.

However, success will depend on maintaining regulatory compliance, earning customer trust, and continuously investing in technological innovation.

7.10 Risk Mitigation Strategy

To reduce exposure to external risks, Zumaris will adopt the following strategies:

- Maintain full GDPR compliance.
- Implement security-by-design principles.
- Monitor regulatory developments.
- Diversify revenue streams.
- Build strategic partnerships.
- Invest continuously in AI research.
- Maintain strong cybersecurity practices.

- Develop scalable cloud infrastructure.

7.11 Five-Year Outlook

Looking ahead, several macro trends are expected to accelerate:

- AI will become embedded in everyday property management.
- Smart homes will generate increasing amounts of operational data.
- Consumers will demand greater transparency regarding property condition.
- Governments will encourage digital compliance and energy efficiency.
- Subscription-based digital services will continue to expand.

These trends strengthen the long-term strategic position of Zumaris Home.

7.12 Chapter Summary

The PESTLE analysis demonstrates that Zumaris operates in an environment characterised by strong technological innovation, increasing digital adoption, and growing demand for trusted property management solutions.

While regulatory, economic and competitive risks remain, the overall external environment is favourable for a platform that combines AI, digital identity and lifecycle property management into a single ecosystem.

By proactively addressing legal, technological and environmental challenges, Zumaris can establish a resilient foundation for sustainable growth across the UK and Europe.

Key Investor Takeaways

- Macro trends strongly support the long-term growth of AI-powered property management.
- Regulatory compliance and data security will be strategic differentiators.
- Sustainability and preventative maintenance create additional market opportunities.
- AI, cloud computing and IoT significantly enhance future scalability.
- Zumaris is well-positioned to benefit from digital transformation across the residential property sector.

CHAPTER 8

PORTER'S FIVE FORCES ANALYSIS

Evaluating the Competitive Dynamics of the AI Property Intelligence Market

Executive Insight

While many startups focus solely on building innovative products, long-term success depends on understanding the competitive forces that shape an industry.

Michael Porter's Five Forces framework evaluates the structural attractiveness of an industry and the ability of a company to create sustainable competitive advantages.

For Zumaris Home, this analysis demonstrates that although the home services industry is competitive, the company's unique positioning as an **AI Property Intelligence Platform** significantly reduces direct competition while creating powerful barriers to entry over time.

8.1 Overview of Porter's Five Forces

The framework evaluates five competitive forces:

1. Threat of New Entrants
2. Bargaining Power of Suppliers
3. Bargaining Power of Buyers
4. Threat of Substitute Products
5. Industry Rivalry

Each force influences profitability, market attractiveness, and long-term sustainability.

8.2 Force One – Threat of New Entrants

Assessment

Medium (declining over time)

Launching a simple home services marketplace has relatively low technical barriers.

However, replicating the complete Zumaris ecosystem would require years of product development, data collection, AI model training, customer acquisition, regulatory compliance, and ecosystem integration.

Initial Entry Barriers

A new competitor would need to build:

- Home Passport™
- Home Health Score™
- Property Timeline™
- Trades Passport™
- AI Website Builder™
- Mobile Applications
- Secure Document Vault
- AI Infrastructure
- Marketplace
- GDPR-Compliant Cloud Platform

This significantly increases development complexity.

Long-Term Barriers

As Zumaris grows, new barriers emerge.

Data Advantage

Millions of maintenance events create proprietary datasets.

AI Advantage

Better data improves AI recommendations.

Better AI attracts more customers.

Trust Advantage

Years of verified service history cannot be copied overnight.

Brand Advantage

People trust platforms that protect their homes.

Trust compounds over time.

Ecosystem Advantage

Homeowners.

Tradespeople.

Estate agents.

Insurance companies.

Mortgage lenders.

Each participant strengthens the ecosystem.

Overall Assessment

Factor	Rating
Entry Barrier Today	Medium
Entry Barrier After 5 Years	High

8.3 Force Two – Bargaining Power of Suppliers

Assessment

Low

Zumaris has relatively few critical suppliers.

Primary suppliers include:

- Cloud providers
- Payment processors
- Mapping services
- AI infrastructure providers
- SMS/Email providers

These suppliers operate in highly competitive markets.

Alternatives exist for almost every service.

Example

Cloud Infrastructure

AWS

Azure

Google Cloud

Oracle Cloud

DigitalOcean

Multiple options reduce supplier power.

Tradespeople

Tradespeople are also suppliers of services.

However,

no individual tradesperson has significant influence over the platform.

The large number of independent professionals reduces supplier concentration.

Overall Assessment

Supplier bargaining power remains low.

8.4 Force Three – Bargaining Power of Buyers

Assessment

Medium

Homeowners have many alternatives today.

They can:

Use paper.

Use Google Drive.

Use Checkatrade.

Use WhatsApp.

Use spreadsheets.

Do nothing.

Therefore,

customer acquisition requires demonstrating clear value.

However,... Once homeowners begin storing years of property history,

their switching cost increases dramatically.

Changing platforms would mean losing:

Maintenance history

Documents

AI insights

Property Timeline™

Home Health Score™

Trusted professionals

This significantly reduces buyer power over time.

Tradespeople

Initially,

tradespeople have moderate bargaining power because they can choose among multiple marketing channels.

However,

as Zumaris generates recurring customers,

dependence on the platform increases.

Overall Assessment

Customer Stage	Buyer Power
New User	Medium
Active Subscriber	Low

8.5 Force Four – Threat of Substitute Products

Assessment

Medium

Alternative solutions exist,

but each solves only part of the problem.

Examples include:

Google Drive

Dropbox

Excel

Paper files

Calendar apps

CRM software

Marketplace platforms

Individual websites

No substitute currently provides:

AI

Digital identity

Property history

Website builder

Marketplace

Maintenance intelligence

Professional verification

within one integrated ecosystem.

Strategic Advantage

Zumaris replaces multiple independent tools simultaneously. Instead of competing against one product, it replaces six or seven products.

Overall Assessment

Threat of substitutes is expected to decrease as customers consolidate more activities within Zumaris.

8.6 Force Five – Industry Rivalry

Assessment

High

The home services industry contains many competitors.

Examples include:

Checkatrade

Rated People

MyBuilder

Taskrabbit

TrustATrader

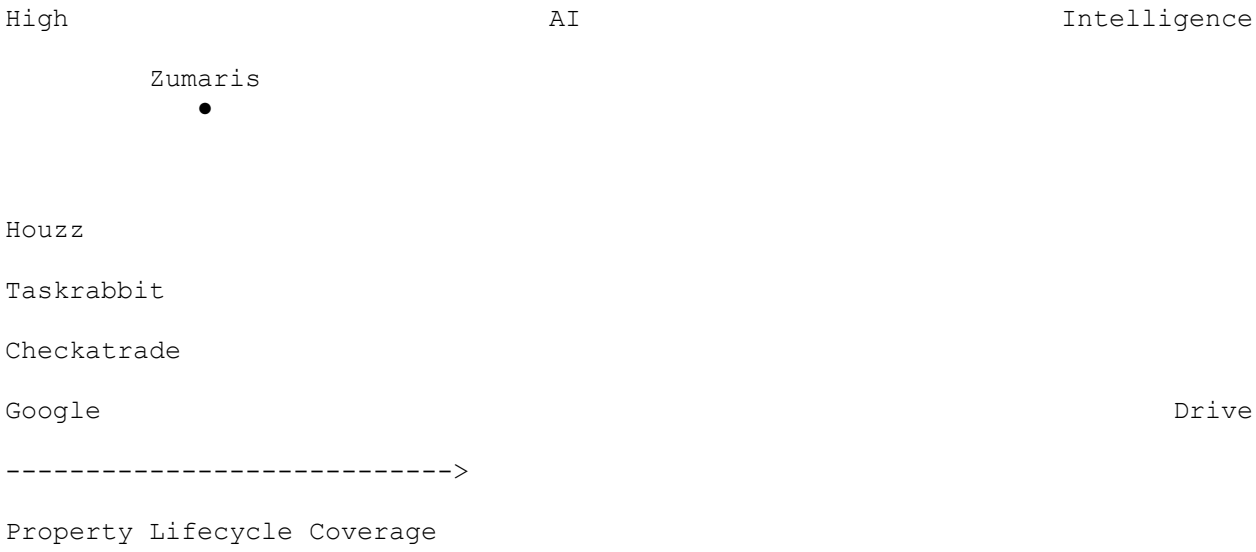

Houzz

Housecall Pro

Jobber

However, most companies compete within individual verticals. Zumaris positions itself differently. Rather than competing for individual transactions, it competes to become the operating system for homeownership.

8.7 Competitive Positioning Map

Traditional competitors occupy only small portions of the lifecycle. Zumaris covers the complete journey.

8.8 Overall Five Forces Assessment

Force	Rating	Impact
Threat of New Entrants	Medium → High Barrier	Positive
Supplier Power	Low	Positive
Buyer Power	Medium → Low	Positive
Substitute Products	Medium	Manageable

Force	Rating	Impact
Competitive Rivalry	High	Addressed through differentiation

8.9 Strategic Implications

The analysis suggests that although competition is strong, Zumaris benefits from several structural advantages.

These include:

- Long-term customer retention.
- Proprietary datasets.
- AI learning effects.
- Ecosystem network effects.
- Multiple revenue streams.
- High switching costs.

Collectively, these advantages create a durable competitive position.

8.10 Building a Sustainable Competitive Moat

Zumaris intends to establish several layers of protection against competitors.

Data Moat

The more homes use Zumaris, the more valuable the platform becomes. Historical maintenance records cannot be replicated.

AI Moat

Every interaction improves prediction accuracy. Competitors without equivalent data will struggle to match recommendation quality.

Brand Moat

Trust is difficult to build and easy to lose. By prioritising transparency, security, and verified information, Zumaris aims to become the most trusted name in digital home management.

Ecosystem Moat

Each additional stakeholder strengthens the platform.

Homeowners attract tradespeople.

Tradespeople attract homeowners.

Enterprise partners increase credibility.

This creates self-reinforcing network effects.

Platform Moat

The integration of Home Passport™, Home Health Score™, Property Timeline™, AI Website Builder™, and Trades Passport™ makes the platform significantly more valuable than the sum of its individual components.

8.11 Chapter Summary

Porter's Five Forces analysis confirms that while the home services market is competitive, Zumaris is strategically positioned to reduce competitive pressure through innovation, data, ecosystem design, and long-term customer relationships.

Rather than competing solely on price or lead generation, Zumaris builds sustainable competitive advantages through proprietary data, Artificial Intelligence, digital identity, and recurring engagement.

This strategy supports long-term profitability and strengthens the company's position as the creator of the AI Property Intelligence category.

Key Investor Takeaways

- Competition is intense, but fragmented.
- Zumaris competes through ecosystem differentiation rather than feature parity.
- Data accumulation and AI learning create increasing barriers to entry.
- Subscription revenue and high switching costs improve long-term economics.
- The platform is designed to become more valuable as adoption grows.

CHAPTER 9

PRODUCT ECOSYSTEM

Building the AI Operating System for Home Ownership

Executive Insight

Most technology companies build individual products.

Zumaris is building an ecosystem. Rather than offering a single application for finding tradespeople or storing property documents, Zumaris integrates multiple intelligent products into one unified platform that accompanies homeowners throughout the entire lifecycle of their property. Each product generates value independently.

Together, they create an ecosystem that becomes increasingly intelligent, trusted and indispensable over time. This ecosystem approach strengthens customer retention, creates network effects, and establishes significant barriers to entry.

9.1 The Zumaris Vision

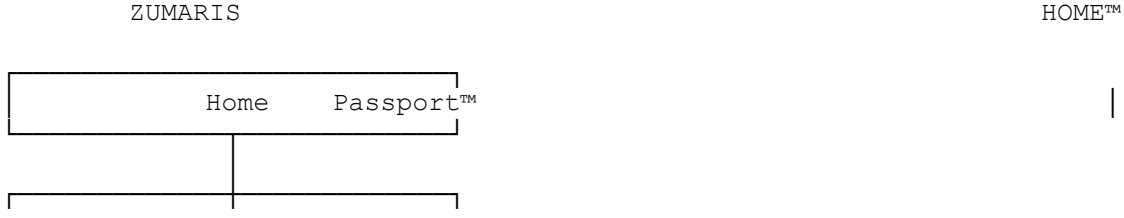

Zumaris believes that every home should have:

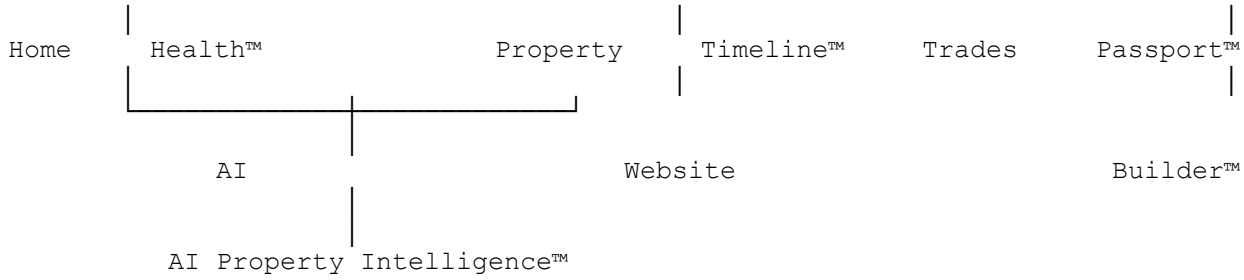

- A permanent digital identity.
- A complete maintenance history.
- Artificial Intelligence assistance.
- Verified service professionals.
- Secure document storage.
- Predictive maintenance.
- Digital compliance.
- Intelligent recommendations.

Instead of forcing homeowners to use ten different applications, Zumaris brings everything together within a single platform.

9.2 Platform Architecture

The Zumaris ecosystem consists of six interconnected pillars.

Every product enhances the value of every other product.

9.3 Core Product One

Home Passport™

The permanent digital identity of every property. Every home receives its own secure digital profile that remains with the property throughout its lifetime.

The Home Passport stores:

- Ownership history
- Renovation records
- Maintenance history
- Appliance information
- Warranties
- Insurance documents
- EPC certificates
- Gas Safety Certificates
- Electrical certificates
- Planning permissions
- Floor plans
- User manuals
- Before & after photos
- Contractor invoices
- Service reports
- Emergency contacts

Unlike cloud storage solutions, every document is linked to the property rather than simply stored in folders.

Customer Value

Homeowners always know:

- What work has been completed.
- Who performed it.

- When it was completed.
- What warranty remains.
- What maintenance is due next.

9.4 Core Product Two

Home Health Score™

This is the intelligence engine of Zumaris. The Home Health Score provides a continuously updated assessment of the property's overall condition. Instead of waiting until something breaks, homeowners receive proactive insights. The score considers factors such as:

- Age of systems
- Maintenance frequency
- Quality of repairs
- Compliance status
- Equipment condition
- Environmental risks
- Outstanding issues
- Preventative maintenance

Example:

```
Overall                                                    Score

91                                  /                        100

Heating

95

Roof

82

Electrical

94

Plumbing

89

Windows

90

Garden

88
```

This score becomes an objective indicator of property health.

9.5 Core Product Three

Property Timeline™

Every event occurring within the property becomes part of a permanent chronological record.

Examples include:

2019

New boiler installed

2020

Roof repaired

2021

Kitchen renovated

2022

Electrical inspection

2023

Garden landscaping

2024

Solar panels installed

Years later, buyers, insurers and future owners can understand the property's complete story.

9.6 Core Product Four

Trades Passport™

Every tradesperson receives a verified professional identity.

This includes:

Business verification

Insurance

Qualifications

Licences

Portfolio

Completed projects

Customer reviews

Skills

Experience

Response time

Trust Score™

Unlike existing directories, every completed project becomes linked to the customer's Home Passport. This creates trusted relationships rather than isolated reviews.

9.7 Core Product Five

AI Website Builder™

Most independent tradespeople cannot afford expensive websites. Zumaris solves this problem.

Within minutes, a tradesperson can generate a fully functional website using Artificial Intelligence.

Features include:

Online booking

Instant quotations

Portfolio

Reviews

Services

Availability

Gallery

Contact forms

SEO optimisation

Google Maps

AI Chat Assistant

CRM integration

Payment links

Every completed project automatically updates the homeowner's Home Passport.

9.8 Core Product Six

AI Property Intelligence™

This is the long-term strategic engine of Zumaris.

The AI continuously learns from millions of property events.

It answers questions such as:

"When should I replace my boiler?"

"What maintenance should I do this autumn?"

"How much will repainting cost next year?"

"Which tradesperson has the highest success rate for Victorian houses?"

"How does my home's condition compare to similar properties?"

This transforms Zumaris from a software platform into an intelligent decision-making assistant.

9.9 Supporting Products (Future Roadmap)

The ecosystem has been intentionally designed for expansion. Future products include:

Home DNA™

A permanent digital fingerprint for every property.

Digital Twin™

A virtual representation of the home, integrating maintenance history, equipment, floor plans and future enhancements.

Home Compliance AI™

Automated monitoring of legal and regulatory obligations.

Trust Score™

Advanced reputation system for service professionals based on verified work rather than simple ratings.

Insurance Insights™

Helping insurers assess risk using verified maintenance history.

Mortgage Insights™

Supporting lenders with trusted property condition data.

Energy Optimisation™

Recommendations for reducing energy costs and improving sustainability.

9.10 Product Synergy

One of Zumaris' greatest strengths is that each product generates value for the others.

For example:

- A completed plumbing job updates the Home Passport™.
- The Home Passport™ improves the Home Health Score™.
- The updated score informs AI recommendations.
- The tradesperson's Trust Score™ increases.
- The project is added to the Property Timeline™.
- The AI learns from the outcome.
- The homeowner receives future maintenance reminders.

This creates a continuous cycle of value creation.

9.11 Product Lifecycle

The homeowner journey begins before any repair takes place.

1. Register the property.
2. Create the Home Passport™.
3. Upload existing documents.
4. Receive the first Home Health Score™.
5. Schedule preventative maintenance.
6. Book verified professionals.
7. Store all future records.
8. Build the property's digital history.

The platform becomes more valuable every year.

9.12 Product Strategy

Rather than launching every feature simultaneously, Zumaris will adopt a phased development strategy.

Phase 1 (Year One)

- Home Passport™
- Document Vault
- Property Timeline™
- Basic Home Health Score™

Phase 2 (Year Two)

- Trades Passport™
- AI Website Builder™
- Marketplace
- Booking Engine

Phase 3 (Years Three–Four)

- AI Property Intelligence™
- Trust Score™
- Predictive Maintenance
- Digital Twin™
- API Integrations

Phase 4 (Years Five+)

- Insurance Platform
- Mortgage Platform
- Energy Optimisation
- Enterprise Services
- European Expansion

9.13 Why This Ecosystem Is Difficult to Copy

Most competitors focus on one problem. Zumaris integrates:

- Property records
- AI
- Marketplaces
- Business software
- Digital identity
- Predictive analytics
- Compliance
- Website generation

Replicating the ecosystem would require years of development and millions of interconnected property events. This creates a strong competitive moat.

9.14 Chapter Summary

The Zumaris product ecosystem is designed to redefine residential property management by integrating digital identity, artificial intelligence, verified professionals and lifecycle data into one unified platform. Each product strengthens the others, creating increasing value for homeowners, tradespeople and future enterprise partners.

Rather than building isolated software features, Zumaris is building the foundational operating system for home ownership.

Key Investor Takeaways

- Ecosystem strategy increases customer retention and lifetime value.
- Products reinforce one another, creating powerful network effects.
- Modular architecture supports phased development and future expansion.
- AI becomes more valuable as property data grows.
- The ecosystem establishes significant barriers to entry and positions Zumaris as a long-term infrastructure platform rather than a transactional marketplace.

CHAPTER 10

WHY ZUMARIS WINS

Defining the Future of Home Ownership

Executive Insight

History has shown that the companies creating the greatest long-term value are rarely those that build the most features—they are those that redefine the market.

Amazon did not simply build an online bookstore.

Uber did not simply build a taxi application.

Airbnb did not simply create another hotel booking website.

Each redefined how people thought about an existing problem.

Zumaris follows the same strategic philosophy.

The company is not building another marketplace for tradespeople. It is redefining how residential properties are owned, maintained and managed through Artificial Intelligence, Digital Identity and Property Intelligence.

10.1 Our Strategic Belief

At Zumaris we believe:

Every home deserves a digital identity.

Just as every person has:

- A passport
- A medical history
- A credit score
- A digital identity

Every home should have:

- A Home Passport™
- A Home Health Score™
- A Property Timeline™
- A Digital Twin™
- A Permanent Maintenance History

This belief forms the foundation of the entire Zumaris platform.

10.2 The Market Today

Today's homeowner uses many disconnected tools.

Activity	**Typical Solution**
Store invoices	Email
Find plumbers	Checkatrade
Save certificates	Google Drive
Maintenance reminders	Calendar
Communicate	WhatsApp
Property notes	Excel
Equipment manuals	Paper folders

Each tool solves one task. None understands the home.

10.3 The Future

Instead of fragmented tools, everything belongs inside one intelligent platform.

The homeowner opens Zumaris and immediately sees:

- Home Health Score™
- Maintenance Timeline
- Upcoming Services
- Warranty Status
- AI Recommendations
- Verified Tradespeople
- Property Documents
- Equipment Status

- Insurance Information

One application.

One property.

One digital truth.

10.4 Why Existing Platforms Cannot Become Zumaris

Traditional marketplaces were designed around transactions. Zumaris is designed around relationships.

Marketplaces ask:

Who can repair this?

Zumaris asks:

How can this home remain healthy for decades?

That difference fundamentally changes the product architecture.

10.5 The Seven Competitive Pillars

Pillar One

Property-Centric Architecture

Everything revolves around the property.

Not around jobs.

Not around tradespeople.

Not around bookings.

This creates long-term customer value.

Pillar Two

Lifetime Data

Most competitors lose value after a transaction. Zumaris becomes more valuable after every interaction.

Each repair.

Each inspection.

Each document.

Each recommendation.

Increases platform intelligence.

Pillar Three

Artificial Intelligence

AI is not an additional feature.

AI becomes the operating layer of the platform.

It continuously answers:

What should I repair?

What should I replace?

How much will it cost?

Which contractor should I trust?

What risks exist?

Pillar Four

Trust

Trust becomes measurable.

Not simply through reviews.

But through:

Verified work.

Verified certificates.

Verified insurance.

Verified maintenance history.

Long-term outcomes.

Trust becomes data.

Pillar Five

Digital Identity

The property receives its own identity.

The tradesperson receives a verified identity.

The work receives a verified record.

The ecosystem becomes self-verifying.

Pillar Six

Ecosystem

Each participant benefits.

Homeowners.

Tradespeople.

Estate agents.

Insurance companies.

Mortgage lenders.

Property managers.

Everyone works from one trusted record.

Pillar Seven

Network Effects

The platform improves as it grows.

More homeowners.

↓

More tradespeople.

↓

More maintenance records.

↓

Better AI.

↓

Better recommendations.

↓

Higher customer satisfaction.

↓

More homeowners.

A continuous flywheel.

10.6 Why AI Changes Everything

Traditional software stores information. Zumaris interprets information.

Examples:

Instead of:

"The boiler was installed in 2018."

Zumaris says:

"This boiler is approaching the period where similar systems experience a 27% increase in failures. Consider servicing it within the next six months."

Instead of:

"You have a roof."

Zumaris says:

"Based on local weather data and previous repairs, your roof should be inspected before winter."

Instead of:

"Your warranty expires next month."

Zumaris says:

"Schedule this maintenance now to preserve your warranty."

This is the difference between storage and intelligence.

10.7 The Zumaris Flywheel

```
More                                                    Homeowners
        ↓
More                              Property                  Records
        ↓
Better                              AI                      Models
        ↓
Higher                            Customer                  Value
        ↓
Higher                                                    Retention
        ↓
More                                                    Tradespeople
        ↓
More                              Completed                 Jobs
        ↓
More                              Property                  Data
        ↓
Better                  Home                  Health      Scores
        ↓
More                                                      Referrals
        ↓
More Homeowners
```

This self-reinforcing cycle creates sustainable growth.

10.8 The Zumaris Moat

Long-term competitive advantage comes from assets that are difficult to replicate. Zumaris intends to build five reinforcing moats.

Data Moat

Millions of verified maintenance events create proprietary datasets.

AI Moat

AI models improve continuously through real-world property data.

Trust Moat

Verified histories create confidence that simple reviews cannot match.

Ecosystem Moat

Every stakeholder strengthens the value of the platform.

Brand Moat

Zumaris becomes synonymous with trusted home ownership.

10.9 Our Long-Term Vision

Our ambition is not to become the largest marketplace. Our ambition is to become the infrastructure that powers home ownership.

In ten years, buying a home without a Home Passport™ should feel as unusual as buying a car without a service history. That is the future Zumaris seeks to create.

10.10 Success Metrics

Zumaris will measure success not only through financial performance but also through customer value.

Key indicators include:

- Active Home Passports™
- Average Home Health Score improvements
- Verified Trades Passports™
- AI recommendations accepted

- Preventative maintenance completed
- Customer retention
- Annual recurring revenue (ARR)
- Marketplace conversion rate
- Customer Lifetime Value (LTV)
- Net Revenue Retention (NRR)
- Net Promoter Score (NPS)
- Average response time of tradespeople
- Average time to resolve maintenance requests

10.11 Why Investors Should Believe

Zumaris benefits from several structural advantages:

- A recurring SaaS model before marketplace commissions.
- Multiple expansion opportunities across PropTech, AI, and Financial Services.
- Proprietary datasets that improve over time.
- Increasing switching costs as customers build years of property history.
- Strong potential for enterprise partnerships with insurers, lenders and estate agencies.
- A vision aligned with long-term digital transformation trends.

Execution remains the key challenge, but the strategic opportunity is substantial.

10.12 Chapter Summary

Zumaris is not competing to build a better home services marketplace.

It is creating a new category centered on the digital identity and long-term intelligence of residential properties.

By combining Home Passport™, Home Health Score™, Property Timeline™, Trades Passport™, AI Website Builder™ and AI Property Intelligence™, the company establishes a platform designed to become an essential part of modern home ownership.

If executed successfully, Zumaris has the potential to become the trusted digital infrastructure for residential properties across the UK and Europe.

Key Investor Takeaways

- The platform is differentiated by its property-centric architecture rather than transaction-centric design.
- Artificial Intelligence is embedded into the core operating model, not added as a feature.
- Long-term data accumulation creates defensible competitive advantages.
- Multiple reinforcing moats increase resilience against competitors.

- The phased roadmap supports scalable growth while maintaining strategic focus.

CHAPTER 11

PRODUCT DEVELOPMENT ROADMAP & TECHNOLOGY STRATEGY

Building the Digital Infrastructure for Home Ownership

Executive Insight

Zumaris is not a single application but a long-term technology platform designed to evolve over time. Rather than attempting to launch every feature simultaneously, the company will follow a phased development strategy that prioritises rapid market validation, customer feedback, and sustainable growth. Each phase introduces new capabilities while strengthening the platform's data, Artificial Intelligence models, and competitive position. This roadmap balances speed to market with long-term scalability.

11.1 Product Development Philosophy

Zumaris follows five core product principles:

Customer First

Every feature must solve a real homeowner or tradesperson problem.

AI by Design

Artificial Intelligence is embedded into the platform from the beginning rather than added later.

Modular Architecture

Every product can evolve independently while remaining connected through a shared platform.

Cloud Native

The platform is designed for scalability, reliability and security using cloud infrastructure.

Data Creates Value

Every interaction should improve future recommendations and customer experience.

11.2 Product Development Lifecycle

The roadmap is divided into five strategic phases.

```
Phase 1 → MVP
↓
Phase 2 → Product-Market Fit
↓
Phase 3 → Marketplace
↓
Phase 4 → AI Expansion
↓
Phase 5 → European Scale
```

Each phase builds upon the previous one.

11.3 Phase One – Minimum Viable Product (Months 1–12)

Objective

Validate customer demand.

Acquire early users.

Build the digital property foundation.

Products

☑ Home Passport™

☑ Secure Document Vault

☑ Property Timeline™

☑ Basic Home Health Score™

Core Features

- User registration
- Property registration
- Upload documents
- Store warranties
- Upload invoices
- Maintenance reminders
- Equipment register
- Mobile responsive interface

Technology Stack

Frontend

- React
- Next.js

Backend

- .NET Core
- Python

Database

- PostgreSQL
- MySQL

Cloud

- Microsoft Azure

Authentication

- Azure AD B2C

Storage

- Azure Blob Storage

AI

- Azure OpenAI Services

Success Metrics

- 2,000 registered homeowners
- 10,000 uploaded documents
- 70% monthly retention
- First subscription revenue

11.4 Phase Two – Intelligent Home Platform (Months 12–24)

Objective

Increase customer engagement.

Launch premium subscriptions.

New Products

Enhanced Home Health Score™

Home Compliance AI™

Smart Maintenance Planner™

New Features

AI document analysis

Automatic certificate detection

Warranty tracking

Maintenance forecasting

Home dashboard

AI assistant

Notifications

Calendar integration

Success Metrics

- 15,000 homeowners
- 3,000 subscriptions
- 80% monthly engagement
- Positive Net Promoter Score (NPS)

11.5 Phase Three – Marketplace Launch (Months 24–36)

Objective

Connect homeowners with trusted professionals.

Products

Trades Passport™

Booking Engine™

Marketplace™

Trust Score™

Features

Tradesperson verification

Booking

Scheduling

Online payments

Quotations

Messaging

Reviews

Service categories

Job history

Commission engine

AI Capabilities

Best contractor recommendations

Estimated repair costs

Project duration predictions

Quality scoring

Success Metrics

- 10,000 verified tradespeople
- 100,000 completed jobs
- Marketplace commission revenue
- Positive unit economics

11.6 Phase Four – AI Intelligence Platform (Years 3–4)

Objective

Transform Zumaris into an AI-powered property intelligence platform.

New Products

AI Property Intelligence™

Digital Twin™

HomeGraph™

Knowledge Graph™

AI Features

Predictive maintenance

Property risk analysis

Equipment lifespan prediction

Image recognition

Voice Assistant

Computer Vision

Property analytics

Success Metrics

- AI used daily by homeowners
- AI recommendation acceptance >70%
- Reduced emergency repairs
- Increased subscription upgrades

11.7 Phase Five – Platform Expansion (Years 4–5)

Objective

Expand across Europe and enter enterprise markets.

Enterprise Products

Insurance API

Mortgage API

Estate Agent Dashboard

Landlord Portal

Developer Portal

Facility Management

Geographic Expansion

United Kingdom

↓

Ireland

↓

Germany

↓

Netherlands

↓

France

↓

Nordic countries

Platform Integrations

Smart home devices

Banks

Insurance companies

Government property databases (where available)

Energy providers

Property valuation services

Success Metrics

- Presence in multiple European markets
- Strategic enterprise partnerships
- Strong ARR growth
- International customer base

11.8 No-Code Website Builder Strategy

One of Zumaris' most innovative products is the **AI Website Builder™**.

Every verified tradesperson can generate a professional business website within minutes.

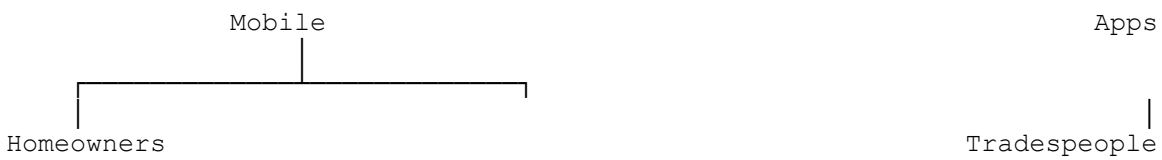

Features include:

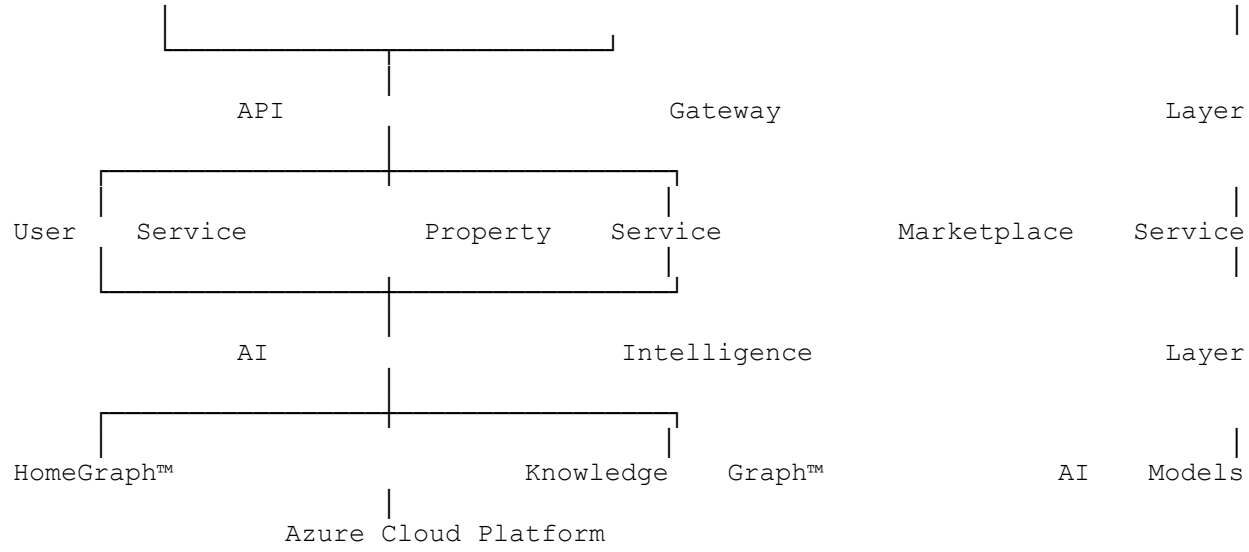

- AI-generated content
- SEO optimisation
- Service catalogue
- Photo gallery
- Online booking
- Payment integration
- Customer testimonials
- Contact forms
- Mobile optimisation
- Google Maps integration

Each website automatically syncs with the Trades Passport™ and completed projects.

This creates a seamless digital presence for service providers.

11.9 Technology Architecture

This modular architecture supports scalability, resilience, and rapid feature deployment.

11.10 Product Development Methodology

Zumaris will adopt an **Agile** methodology with two-week development sprints.

Key practices include:

- User story mapping
- Continuous integration and deployment (CI/CD)
- Automated testing
- Security-by-design
- Feature flags
- Regular customer feedback sessions
- Quarterly roadmap reviews

This approach enables rapid iteration while maintaining product quality.

11.11 Innovation Pipeline

Beyond the five-year roadmap, Zumaris will continuously evaluate new technologies.

Potential innovations include:

- AR-assisted home inspections
- Drone-based roof assessments
- AI-generated renovation plans
- Smart sensor integrations
- Predictive insurance pricing

- Automated claims support
- Sustainability dashboards
- Voice-controlled home maintenance assistant

Innovation will remain a core capability rather than a one-off initiative.

11.12 Chapter Summary

Zumaris will follow a phased product development strategy that prioritises early market validation, scalable architecture, and continuous innovation.

By launching a focused MVP, expanding into an AI-powered homeowner platform, introducing a trusted marketplace, and ultimately becoming the digital infrastructure for residential property management, the company aims to build a defensible and scalable technology business.

The roadmap ensures that every stage creates measurable customer value while strengthening the platform's data assets and competitive advantages.

Key Investor Takeaways

- Phased development reduces execution risk and capital requirements.
- The MVP is designed to achieve product-market fit before marketplace expansion.
- AI capabilities are embedded throughout the roadmap rather than treated as optional enhancements.
- Modular cloud architecture supports rapid scaling and enterprise integrations.
- The roadmap creates multiple future revenue streams while maintaining strategic focus.

CHAPTER 12

BUSINESS MODEL & REVENUE STRATEGY

Creating a Scalable Multi-Revenue AI Platform

Executive Insight

Zumaris has been designed as a multi-sided digital platform with diversified and recurring revenue streams. Rather than relying solely on marketplace commissions, the company combines Software-

as-a-Service (SaaS), subscription services, transaction fees, enterprise licensing, Artificial Intelligence services, and future data-driven partnerships.

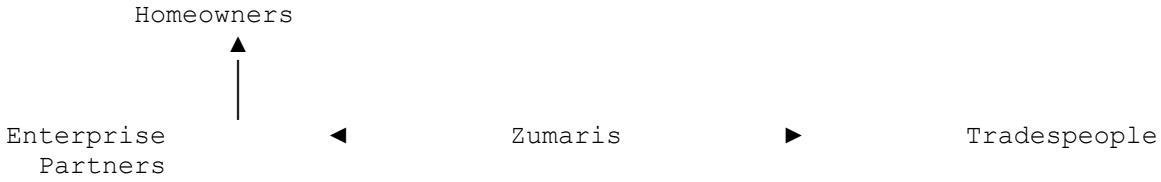

This diversified model reduces commercial risk while increasing long-term company valuation.

The strategic objective is to maximise **Annual Recurring Revenue (ARR)** while gradually expanding high-margin enterprise revenues.

12.1 Business Model Overview

Zumaris operates as a **Hybrid Platform**.

Three customer groups interact within one ecosystem.

Each participant creates value for the others.

12.2 Customer Segments

Primary Customers

Homeowners

Need:

- Property records
- Maintenance management
- AI recommendations
- Secure storage
- Trusted professionals

Revenue Source

Monthly subscription

Premium features

Marketplace usage

Tradespeople

Need:

- Digital presence
- Website
- Leads
- CRM
- Reputation
- Bookings

Revenue Source

Monthly subscription

Marketplace commission

Advertising

Enterprise Partners

Future customers include:

Insurance companies

Banks

Mortgage lenders

Estate agencies

Housing associations

Property developers

Facility management companies

Revenue Source

API licensing

Enterprise subscriptions

Data services

White-label solutions

12.3 Revenue Model

Zumaris follows a layered revenue strategy.

Revenue Layer 1

SaaS Subscription

Homeowners subscribe to premium plans.

Example features:

Unlimited document storage

Advanced Home Health Score™

AI Assistant

Property analytics

Compliance monitoring

Family sharing

Priority support

Expected Pricing

Basic

Free

Premium

£9.99/month

Family

£14.99/month

Professional Property Owner

£29.99/month

Revenue Layer 2

Tradesperson Subscription

Every service provider can choose between:

Free profile

Professional profile

Premium Business Suite

Enterprise

Insurance preparation

Mortgage readiness

Personalised reports

Subscription or pay-per-use.

Revenue Layer 7

Home Compliance™

Automatic compliance management.

Ideal for:

Landlords

Holiday rentals

Property managers

Subscription model.

Revenue Layer 8

Enterprise APIs

Insurance companies.

Mortgage providers.

Estate agencies.

Smart home providers.

Government partners.

Revenue Model

Annual licensing.

API usage.

Enterprise contracts.

Revenue Layer 9

White Label Platform

Future opportunity.

Banks.

Insurance companies.

Housing associations.

Large maintenance firms.

Operate Zumaris technology under their own brand.

High-margin B2B revenue.

Revenue Layer 10

Marketplace Financial Services

Future opportunities.

Embedded finance.

Repair financing.

BNPL.

Insurance quotes.

Mortgage referrals.

Revenue sharing.

Revenue Layer 11

Home Intelligence Reports™

Professional reports generated by AI.

Examples

Pre-sale report

Insurance report

Mortgage report

Property condition report

Annual maintenance report

Paid individually.

Revenue Layer 12

Property Digital Twin™

Premium subscription.

3D visualisation.

Lifecycle analytics.

Predictive modelling.

Ideal for premium homeowners.

Revenue Layer 13

Smart Home Integrations

Future partnerships with:

Hive

Google Nest

Ring

Philips Hue

Smart meters

Energy providers

Subscription sharing.

Partner revenue.

Revenue Layer 14

Data Insights Platform (Privacy-Preserving)

Aggregated and anonymised market intelligence for:

Insurance companies

Government agencies

Construction firms

Manufacturers

Property developers

No personally identifiable information (PII) will ever be sold. All insights will comply with UK GDPR and use anonymised, aggregated datasets.

Revenue Layer 15

Developer Marketplace

Third-party developers build applications on Zumaris APIs.

Revenue:

Revenue sharing

Developer subscriptions

App marketplace

12.4 Revenue Evolution

```
Year 1

Subscriptions

↓

Year 2

Marketplace

↓

Year 3

AI Services

↓

Year 4

Enterprise APIs

↓

Year 5

Platform Ecosystem
```

Revenue becomes increasingly diversified over time.

12.5 Pricing Philosophy

Pricing follows four principles.

Affordable.

Transparent.

Scalable.

Value-driven.

Freemium encourages rapid adoption.

Premium subscriptions unlock advanced intelligence.

Enterprise pricing reflects strategic value.

12.6 Customer Lifetime Value (LTV)

The average homeowner remains in the same property for many years. As more property history accumulates, switching becomes less attractive. This significantly increases Lifetime Value.

Similarly, tradespeople benefit from growing customer bases and verified reputations. Enterprise contracts are expected to have multi-year durations.

12.7 Unit Economics

Key performance indicators include:

- Monthly Recurring Revenue (MRR)
- Annual Recurring Revenue (ARR)
- Customer Acquisition Cost (CAC)
- Customer Lifetime Value (LTV)
- LTV/CAC Ratio
- Gross Margin
- Net Revenue Retention (NRR)
- Churn Rate
- Payback Period

Target Metrics (5-Year Vision):

Metric	**Target**
Gross Margin	>80%
LTV/CAC Ratio	>4:1
Annual Churn	<8%

Metric	Target
ARR Growth	>100% YoY (early stage)
Net Revenue Retention	>120%

12.8 Scalability

The business model scales efficiently because:

- Software has low marginal cost.
- AI improves with increased data.
- Digital products require minimal physical infrastructure.
- Marketplace expansion increases network effects.
- Enterprise APIs create high-margin recurring revenue.

This enables significant operating leverage as the customer base grows.

12.9 Strategic Advantages

The business model combines:

- Recurring SaaS income.
- Transaction-based commissions.
- High-margin enterprise services.
- AI-powered premium offerings.
- Future financial services integration.

This diversification enhances resilience and supports long-term valuation.

12.10 Chapter Summary

Zumaris has been designed as a diversified AI-powered platform with multiple complementary revenue streams. The phased evolution—from homeowner subscriptions to marketplace commissions and enterprise partnerships—creates a balanced revenue portfolio that reduces dependence on any single income source. By prioritising recurring subscription revenue while expanding into high-margin enterprise services, Zumaris establishes a scalable business model capable of supporting long-term sustainable growth.

Key Investor Takeaways

- Diversified revenue model with 15 complementary income streams.
- Strong focus on recurring revenue (ARR) from subscriptions.
- Marketplace commissions provide additional transaction-based growth.
- Enterprise APIs and white-label solutions offer high-margin B2B expansion.
- The platform architecture supports scalable growth and attractive unit economics.

CHAPTER 13

GO-TO-MARKET STRATEGY

Acquiring Homeowners, Tradespeople and Enterprise Partners

Executive Insight

A great product alone does not guarantee success. Sustainable growth depends on reaching the right customers through the right channels at the right time. Zumaris will adopt a phased Go-to-Market (GTM) strategy designed to validate demand, build trust, achieve product-market fit, and scale efficiently while maintaining disciplined customer acquisition costs. The strategy focuses on creating a two-sided ecosystem where homeowners and tradespeople reinforce each other's growth, eventually expanding into enterprise partnerships.

13.1 Go-to-Market Objectives

The primary objectives of the GTM strategy are:

- Acquire early adopters.
- Validate Product-Market Fit (PMF).
- Build brand trust.
- Create recurring subscription revenue.
- Establish marketplace liquidity.
- Minimise Customer Acquisition Cost (CAC).
- Generate referral-driven growth.
- Prepare for European expansion.

13.2 Target Customer Rollout

Rather than targeting everyone simultaneously, Zumaris will expand in carefully defined stages.

Phase 1

Homeowners

↓

Phase 2

Independent Tradespeople

↓

Phase 3

Local Service Businesses

↓

Phase 4

Estate Agents

↓

Phase 5

Insurance & Mortgage Partners

↓

Phase 6

Enterprise Clients

This staged rollout reduces complexity and improves execution.

13.3 Beachhead Market

The initial launch will focus on:

Geography

Greater London

Reasons:

- High population density.
- Large number of homeowners.
- High property values.
- Significant demand for maintenance services.
- Strong digital adoption.

Customer Profile

Age:

30–60

Characteristics:

- Own their home.
- Comfortable using digital services.
- Frequently hire tradespeople.
- Value organisation and preventative maintenance.

13.4 Customer Acquisition Channels

Zumaris will use multiple complementary acquisition channels.

Organic SEO

Educational content targeting searches such as:

- Home maintenance checklist
- Boiler service reminders
- Home document storage
- Property maintenance app
- Homeowner guide
- Property records

Goal:

Become the leading educational resource for homeowners.

Content Marketing

Create:

- Maintenance calendars

- Seasonal guides
- AI-generated home reports
- Checklists
- Video tutorials
- Interactive calculators

This content builds trust before asking users to subscribe.

Social Media

Primary platforms:

- LinkedIn (professionals and partnerships)
- Facebook (local homeowner communities)
- Instagram (visual property transformations)
- YouTube (educational content)
- TikTok (short maintenance tips)

Content themes:

- Before & after projects.
- Home maintenance tips.
- Tradesperson success stories.
- Product demonstrations.
- AI insights.

Email Marketing

Automated journeys:

- Welcome series.
- Seasonal reminders.
- Compliance alerts.
- Product updates.
- Educational newsletters.
- Upgrade campaigns.

Referral Programme

Every satisfied homeowner becomes a potential advocate.

Referral rewards may include:

- Free premium months.
- Additional storage.
- AI report credits.

- Marketplace discounts.

This reduces acquisition costs while increasing trust.

Local Community Partnerships

Collaborate with:

- Resident associations.
- Community centres.
- Local councils (where appropriate).
- Housing charities.
- Home improvement events.

13.5 Tradesperson Acquisition Strategy

Tradespeople are critical to marketplace success.

The initial value proposition is **not lead generation**.

Instead, Zumaris offers:

- Free digital profile.
- AI Website Builder™.
- Online booking.
- Portfolio.
- Customer reviews.
- Digital business tools.

These services create value before marketplace commissions begin.

13.6 Enterprise Sales Strategy

Enterprise customers require a consultative sales approach.

Potential partners include:

- Insurance companies.
- Mortgage providers.
- Estate agencies.
- Housing associations.
- Property developers.
- Facilities management firms.

Sales activities:

- Industry conferences.
- Pilot projects.
- API demonstrations.
- Strategic partnerships.
- Thought leadership.

13.7 Brand Positioning

Zumaris is positioned as:

The AI Operating System for Home Ownership

Brand attributes:

- Trusted.
- Intelligent.
- Simple.
- Secure.
- Modern.
- Helpful.
- Transparent.

The platform aims to become synonymous with proactive home management.

13.8 Pricing Strategy

A freemium model will accelerate adoption.

Homeowners

Free:

- Basic Home Passport™
- Limited document storage
- Basic reminders

Premium:

- AI insights
- Unlimited storage
- Compliance monitoring
- Advanced reports

Tradespeople

Free:

- Business profile

Premium:

- AI Website Builder™
- Booking engine
- CRM
- Marketing tools
- Priority placement

13.9 Customer Journey

Homeowner Journey

1. Discover Zumaris.
2. Register an account.
3. Add a property.
4. Upload documents.
5. Receive the first Home Health Score™.
6. Receive maintenance reminders.
7. Upgrade to Premium.
8. Book trusted professionals.
9. Build a lifetime property history.

Tradesperson Journey

1. Create profile.
2. Verify identity.
3. Generate website.
4. Add portfolio.
5. Receive bookings.
6. Build Trust Score™.
7. Upgrade subscription.
8. Expand business.

13.10 Growth Flywheel

```
Educational                                                    Content
        ↓
Website                                                        Traffic
        ↓
```

```
Free                                                    Registrations
        ↓
Home                              Passport                    Creation
        ↓
Premium                                                     Upgrades
        ↓
More                                Property                    Data
        ↓
Better                             AI                  Recommendations
        ↓
Higher                            Customer                Satisfaction
        ↓
Referrals
        ↓
More Customers
```

This self-reinforcing loop lowers acquisition costs over time.

13.11 Key Marketing Metrics

Zumaris will monitor:

- Customer Acquisition Cost (CAC)
- Customer Lifetime Value (LTV)
- Conversion Rate
- Monthly Active Users (MAU)
- Daily Active Users (DAU)
- Referral Rate
- Organic Traffic Growth
- Email Open Rate
- Churn Rate
- Net Promoter Score (NPS)
- Marketplace Conversion
- Premium Upgrade Rate

These metrics will guide marketing investment and product improvements.

13.12 Five-Year Go-to-Market Timeline

Year	**Primary Focus**
Year 1	Product-Market Fit & Homeowners
Year 2	Marketplace Launch & Tradespeople
Year 3	AI Differentiation & National Expansion

Year	Primary Focus
Year 4	Enterprise Partnerships & European Entry
Year 5	Ecosystem Leadership & Platform Scaling

13.13 Chapter Summary

Zumaris will enter the market through a disciplined, phased Go-to-Market strategy that prioritises early validation, strong customer relationships, and sustainable growth.

By focusing initially on homeowners, delivering immediate value through Home Passport™ and AI-powered maintenance tools, and later expanding into tradespeople and enterprise partnerships, the company creates a scalable growth engine supported by recurring revenue, referrals, and network effects.

Key Investor Takeaways

- Lean launch strategy aligned with the initial £5,000 budget.
- Freemium model designed to maximise adoption while encouraging premium upgrades.
- Multi-channel acquisition reduces dependence on paid advertising.
- Referral and content-led growth improve customer acquisition efficiency.
- Clear phased expansion roadmap from local launch to international scale.

CHAPTER 14

ARTIFICIAL INTELLIGENCE STRATEGY

Building the AI Brain for Every Home

Executive Summary

Artificial Intelligence is the strategic foundation of the Zumaris platform. Unlike traditional home service marketplaces, where AI is primarily used for search or recommendation engines, Zumaris integrates Artificial Intelligence into every stage of the homeowner journey.

The objective is not simply to automate tasks, but to create an intelligent digital assistant capable of understanding a home's history, predicting future needs, reducing maintenance costs, and helping homeowners make better decisions throughout the lifetime of their property. As more property data is collected, the intelligence of the platform continuously improves, creating a self-reinforcing competitive advantage.

14.1 AI Vision

Zumaris believes every home should have its own intelligent assistant.

Rather than searching for information manually, homeowners should be able to ask questions naturally, such as:

- "When should I service my boiler?"
- "What maintenance is due this summer?"
- "Which contractor previously repaired my roof?"
- "What is likely to cost me the most over the next five years?"
- "Is my home healthier than similar homes nearby?"
- "Which improvements will add the most value before I sell?"

The platform will transform static property information into personalised, actionable intelligence.

14.2 AI Philosophy

Artificial Intelligence within Zumaris follows five guiding principles.

Explainable AI

Every recommendation should include a clear explanation.

Example:

"We recommend servicing your boiler because it has not been inspected for 14 months and similar systems of this age have a higher probability of failure."

Human-Centred AI

AI assists users in making informed decisions rather than replacing professional expertise.

Homeowners remain in control of all maintenance decisions.

Privacy by Design

Customer data will never be sold.

AI models are trained using anonymised and aggregated information where appropriate, in compliance with UK GDPR.

Continuous Learning

Each verified maintenance event improves future recommendations.

The platform becomes increasingly accurate over time.

Responsible AI

AI recommendations will always prioritise safety, transparency and customer wellbeing.

14.3 AI Capabilities

Zumaris AI consists of multiple specialised intelligence modules.

AI Document Intelligence™

Automatically analyses uploaded documents.

Capabilities include:

- Reading invoices
- Identifying warranty periods
- Extracting contractor names
- Detecting appliance models
- Finding expiry dates
- Categorising certificates
- Flagging missing documents

Maintenance Intelligence™

Predicts future maintenance requirements.

Examples:

- Boiler servicing
- Roof inspections
- Plumbing maintenance
- Electrical safety
- Exterior painting

- Garden care

Rather than using fixed schedules, recommendations consider:

- Property age
- Equipment age
- Climate
- Previous maintenance
- Manufacturer guidance
- Usage patterns

Cost Intelligence™

Provides homeowners with estimated future maintenance costs.

Example dashboard:

Category	Estimated Cost	Recommended Time
Boiler Service	£120	6 months
Roof Inspection	£350	1 year
Exterior Painting	£2,400	3 years
Window Replacement	£4,800	6 years

This helps families budget proactively rather than react to unexpected expenses.

AI Property Assistant™

Users interact with the platform using natural language.

Example conversation:

User

"What work has been completed in the kitchen?"

AI

"The kitchen was renovated in June 2024 by ABC Kitchens Ltd. The project included new cabinets, flooring and electrical upgrades. The workmanship warranty expires in June 2027."

Contractor Intelligence™

Rather than displaying tradespeople based solely on ratings, the AI evaluates:

- Experience
- Verified work history
- Completion quality
- Customer satisfaction
- Property type
- Response time
- Distance
- Specialist expertise

The platform recommends the most appropriate professional for each specific property.

Home Health Intelligence™

AI continuously updates the Home Health Score™.

Factors include:

- Maintenance frequency
- Equipment age
- Safety compliance
- Outstanding repairs
- Historical failures
- Environmental conditions
- Preventative maintenance

The score evolves dynamically as new information becomes available.

14.4 The HomeGraph™

The long-term intelligence of Zumaris is powered by a proprietary knowledge model called **HomeGraph™**.

Instead of storing isolated records, HomeGraph™ maps the relationships between:

- Properties
- Rooms
- Appliances
- Contractors
- Repairs
- Documents
- Warranties

- Safety certificates
- Maintenance schedules
- Homeowners

This interconnected graph enables deeper reasoning than traditional databases.

Example:

If a boiler is replaced, the system automatically updates:

- Property Timeline™
- Home Health Score™
- Warranty records
- Maintenance schedule
- Contractor profile
- Future budget forecasts

14.5 Predictive Intelligence

Rather than reacting to problems, Zumaris anticipates them.

Potential capabilities include:

- Predicting appliance failures.
- Identifying overdue maintenance.
- Forecasting annual maintenance budgets.
- Detecting recurring issues.
- Suggesting preventative actions.
- Identifying seasonal risks.

This shifts homeowners from reactive maintenance to proactive property care.

14.6 AI Personalisation

Each homeowner receives personalised recommendations based on:

- Property characteristics.
- Previous maintenance.
- Household preferences.
- Budget.
- Climate.
- Occupancy patterns.
- Future plans.

No two Home Health Scores™ are identical.

14.7 AI for Tradespeople

Artificial Intelligence also supports service providers.

Capabilities include:

- Automatic quotation drafting.
- AI-generated service descriptions.
- Website content creation.
- Appointment optimisation.
- Customer communication assistance.
- Review analysis.
- Business performance insights.

This enables small businesses to compete with much larger organisations.

14.8 AI Governance

Zumaris will establish an internal AI governance framework covering:

- Human oversight.
- Model monitoring.
- Bias assessment.
- Security reviews.
- Customer transparency.
- Data retention policies.
- Regulatory compliance.

The company aims to align with evolving UK and EU AI regulations.

14.9 Future AI Roadmap

Over the next five years, the AI platform will expand to include:

- Computer vision for property inspections.
- Voice-based home assistant.
- Smart sensor integration.
- Digital Twin™ simulation.
- Energy optimisation recommendations.
- Renovation planning.
- Insurance risk scoring.
- Mortgage readiness analysis.

These capabilities will strengthen the platform's value proposition while creating new revenue opportunities.

14.10 Chapter Summary

Artificial Intelligence is not an optional enhancement to Zumaris—it is the platform's core operating layer. By combining structured property data, verified maintenance history, predictive analytics and natural language interaction, Zumaris aims to become the intelligent operating system for home ownership. As the volume and quality of property data increase, the platform's recommendations become increasingly accurate, creating a powerful competitive advantage and reinforcing customer loyalty.

Key Investor Takeaways

- AI is embedded across every major product, not limited to search or automation.
- HomeGraph™ provides a proprietary knowledge model that strengthens defensibility.
- Predictive intelligence reduces homeowner costs and improves decision-making.
- AI capabilities create additional premium subscription and enterprise revenue opportunities.
- Responsible AI governance supports trust, compliance and long-term scalability.

CHAPTER 15

HOME HEALTH SCORE™

Measuring the Health of Every Home with Artificial Intelligence

Executive Summary

The Home Health Score™ is Zumaris' proprietary property intelligence system that provides homeowners with a continuously updated assessment of their home's overall condition. Much like a credit score reflects financial health, the Home Health Score™ reflects the structural, mechanical, safety and maintenance health of a property. Rather than relying on periodic inspections alone, the score evolves continuously using verified maintenance records, AI analysis, compliance status and predictive analytics. The Home Health Score™ empowers homeowners to make informed decisions, reduce unexpected repair costs and protect the long-term value of their property.

15.1 The Problem

Today, homeowners rarely know the true condition of their property.

Questions such as:

- Is my house well maintained?
- Am I falling behind on maintenance?
- Which systems require urgent attention?
- How healthy is my home compared to similar properties?

are difficult to answer objectively.

Most homeowners only discover problems after failures occur.

This reactive approach leads to higher costs and increased stress.

15.2 The Solution

Home Health Score™ provides a simple numerical score between **0 and 100**.

Example:

```
Home                                    Health                                  Score™

Overall                                                                          Score

91                                        /                                       100

Excellent
```

The score is updated automatically whenever new information is added to the Home Passport™.

It acts as a living indicator of property condition.

15.3 Score Categories

The overall score is calculated from several weighted categories.

Category	**Example Weight**
Structural Integrity	20%
Heating & Plumbing	15%
Electrical Systems	15%

Category	Example Weight
Roof & Exterior	10%
Safety Compliance	10%
Appliances	10%
Energy Efficiency	10%
Maintenance History	10%

The weighting model will evolve over time as AI learns from real-world outcomes.

15.4 AI Inputs

The Home Health Score™ combines multiple data sources.

Examples include:

- Maintenance history
- Uploaded invoices
- Safety certificates
- Warranty status
- Equipment age
- Previous repairs
- AI document analysis
- User-reported issues
- Verified contractor reports
- Property characteristics
- Weather exposure
- Seasonal risks

This creates a holistic assessment rather than relying on a single inspection.

15.5 Dynamic Scoring

The score changes over time.

Positive events increase the score:

- Boiler serviced
- Electrical inspection passed
- Roof repaired

- New insulation installed
- Safety certificates renewed

Negative factors reduce the score:

- Expired warranties
- Missed maintenance
- Outstanding repairs
- Safety issues
- Repeated failures
- Water damage reports

This ensures the score reflects the current condition of the home.

15.6 Example Dashboard

```
Overall                                 Home                                 Health

91                                       /                                    100

★★★★★

Heating

95

Electrical

93

Roof

84

Plumbing

90

Windows

88

Safety

97

Energy

82
```

The dashboard allows homeowners to identify priorities at a glance.

15.7 AI Recommendations

The score is accompanied by practical recommendations.

Example:

Current Score: 84

AI Suggestions:

- Service the boiler within 30 days.
- Replace smoke alarm batteries.
- Schedule a roof inspection before winter.
- Renew the Gas Safety Certificate.
- Insulate the loft to improve energy performance.

These actions help homeowners improve both the score and the condition of their property.

15.8 Home Health Trend

The platform tracks how the property's health changes over time.

2025

76

↓

2026

82

↓

2027

89

↓

2028

93

This historical trend demonstrates the effectiveness of proactive maintenance.

15.9 Benchmarking

Homeowners can compare their score anonymously with similar properties.

Examples:

- Homes of similar age.
- Similar construction type.
- Same postcode region.
- Comparable floor area.

This helps users understand how their property performs relative to peers without revealing personal information.

15.10 Benefits for Homeowners

- Clear visibility into property condition.
- Prioritised maintenance planning.
- Reduced unexpected repair costs.
- Increased confidence when buying or selling.
- Better budgeting.
- Improved safety.
- Enhanced property value over time.

15.11 Benefits for Enterprise Partners

Insurance Companies

More accurate risk assessment.

Potential premium incentives for well-maintained properties.

Mortgage Providers

Additional insight into long-term property condition.

Estate Agents

Verified maintenance records support property marketing.

Housing Associations

Portfolio-wide monitoring of asset condition.

15.12 Future Evolution

The Home Health Score™ will continue to evolve through AI.

Future capabilities may include:

- Predictive failure alerts.
- Climate resilience scoring.
- Sustainability scoring.
- Indoor air quality indicators.
- Carbon footprint assessments.
- Smart home sensor integration.
- Occupancy-aware recommendations.

15.13 Competitive Position

No major home services platform currently offers a comprehensive, AI-driven property health score integrated with a lifelong maintenance history. This positions Home Health Score™ as a distinctive intellectual property and a core differentiator for Zumaris.

15.14 Monetisation Opportunities

The Home Health Score™ supports multiple revenue streams:

- Premium homeowner subscriptions.
- Annual AI property reports.
- Pre-sale property health certificates.
- Insurance partnerships.
- Mortgage readiness assessments.
- Landlord compliance packages.
- Property portfolio analytics.

15.15 Chapter Summary

The Home Health Score™ transforms fragmented maintenance records into an intuitive, continuously updated measure of property wellbeing. By combining AI, verified maintenance history and predictive analytics, it enables homeowners to move from reactive repairs to proactive property management.

As adoption grows, the scoring model becomes increasingly accurate, reinforcing Zumaris' position as the intelligent operating system for home ownership.

Key Investor Takeaways

- Creates a proprietary, defensible AI asset.
- Encourages recurring customer engagement.
- Strengthens premium subscription value.
- Supports enterprise partnerships with insurers and lenders.
- Increases customer retention as the score becomes more meaningful over time.

CHAPTER 16

HOME DNA™

Creating the World's First Digital Genetic Profile for Every Home

Executive Summary

Every person has a unique genetic identity.

Every property has a unique construction history, maintenance pattern, material composition, environmental exposure and operational behaviour. Today, this information exists only as fragmented records. Zumaris introduces **Home DNA™**, a proprietary digital identity model that captures the unique characteristics of every residential property throughout its lifetime. Home DNA™ transforms a house from a physical structure into a continuously evolving digital asset capable of supporting Artificial Intelligence, predictive maintenance and trusted property intelligence. This innovation represents a new category within PropTech.

16.1 The Vision

Every property is unique.

Even two identical houses built next to each other will evolve differently.

Different owners.

Different repairs.

Different materials.

Different weather exposure.

Different maintenance quality.

Different contractors.

Different renovations.

Different failures.

Over time, every home develops its own "DNA".

Zumaris captures this digital DNA.

16.2 What is Home DNA™?

Home DNA™ is a proprietary digital model that records every important characteristic influencing the long-term condition of a property.

Unlike traditional property databases, Home DNA™ is dynamic.

It continuously evolves.

Every new maintenance activity changes the DNA.

Every renovation enriches it.

Every inspection improves its accuracy.

16.3 Components of Home DNA™

Each Home DNA™ profile contains multiple intelligence layers.

Structural DNA

- Construction type
- Building materials
- Foundation
- Roof structure
- External walls
- Windows
- Insulation

Mechanical DNA

- Boiler
- Plumbing
- Heating
- Ventilation
- Air conditioning
- Solar panels
- Batteries

Electrical DNA

- Consumer unit
- Wiring age
- Smart devices
- EV chargers
- Safety inspections

Maintenance DNA

- Repair frequency
- Contractor quality
- Preventative maintenance
- Missed services
- Equipment replacements

Environmental DNA

- Flood exposure
- Weather conditions
- Pollution
- Humidity
- Coastal impact
- Soil characteristics

Behavioural DNA

AI gradually learns:

- Occupancy patterns
- Maintenance behaviour
- Spending priorities
- Preferred contractors
- Seasonal habits

All behavioural insights are privacy-preserving and controlled by the homeowner.

16.4 Why Home DNA™ Matters

Traditional systems ask:

"What happened?"

Home DNA™ asks:

"Why did it happen?"

Example

Two boilers fail after ten years.

AI discovers:

House A

Annual servicing.

High-quality water.

Low usage.

Failure caused by manufacturer defect.

House B

No servicing.

Hard water.

Heavy usage.

Poor ventilation.

Failure caused by maintenance neglect.

The AI learns fundamentally different lessons.

16.5 AI Learning

Every verified maintenance event improves the Home DNA™ model.

Over time AI learns relationships between:

Materials

↓

Climate

↓

Maintenance

↓

Equipment lifespan

↓

Repair costs

↓

Future failures

This creates a continuously improving intelligence engine.

16.6 Home DNA™ Evolution

```
Year                                                    1

Maintenance                                             DNA
↓
Year                                                    3
Behavioural                                             Patterns
↓
Year                                                    4
Predictive                                              Intelligence
```

```
↓

Year                                                                    5

Digital                                                              Twin™

↓

Year                                                                   10

Fully Intelligent Home
```

16.7 Benefits for Homeowners

Home DNA™ enables:

- Better maintenance decisions.
- Lower repair costs.
- More accurate budgeting.
- Faster insurance claims.
- Better resale value.
- Trusted property history.
- Personalised AI advice.

16.8 Benefits for Buyers

Future buyers receive:

Verified maintenance history.

Equipment lifespan.

Renovation timeline.

Structural insights.

Potential future risks.

Expected maintenance costs.

Instead of buying a house blindly,

they buy with confidence.

16.9 Benefits for Insurance

Insurance companies may eventually use Home DNA™ to improve underwriting.

Potential applications include:

Property risk scoring.

Maintenance verification.

Claims assessment.

Fraud reduction.

Preventative maintenance incentives.

All partnerships will be subject to customer consent and applicable regulations.

16.10 Benefits for Mortgage Providers

Banks gain:

Better visibility into property condition.

Improved long-term risk assessment.

Supporting evidence for lending decisions.

Potential integration with mortgage lifecycle services.

16.11 Home DNA™ + HomeGraph™

Home DNA™ describes the property.

HomeGraph™ understands the relationships.

Together they create:

Property Intelligence Platform™

```
Property

↓

Home                                                    Passport™

↓
```

```
Home                                                                DNA™
↓
HomeGraph™
↓
Artificial                                                  Intelligence™

↓
Recommendations
```

16.12 Future Expansion

Future modules include:

Climate DNA™

Energy DNA™

Sustainability DNA™

Safety DNA™

Accessibility DNA™

Smart Device DNA™

Construction DNA™

Financial DNA™

Each module further enhances the platform's intelligence.

16.13 Intellectual Property Strategy

Home DNA™ represents a core intellectual property asset for Zumaris.

The company intends to protect its innovation through:

- Trademark registration.

- Copyright protection.
- Trade secrets.
- Proprietary data models.
- Potential patent applications where applicable.
- Proprietary AI methodologies.

This strengthens long-term enterprise value.

16.14 Chapter Summary

Home DNA™ transforms every property into a living digital identity that evolves throughout its lifecycle. By combining structural information, maintenance history, environmental context and AI learning, Home DNA™ provides the foundation for predictive property intelligence and long-term customer value. As adoption grows, the richness of Home DNA™ becomes increasingly difficult to replicate, reinforcing Zumaris' strategic position as the digital infrastructure for home ownership.

Key Investor Takeaways

- Introduces a new category of digital property intelligence.
- Creates a proprietary, continuously evolving data asset.
- Enhances AI accuracy and predictive capabilities.
- Strengthens long-term customer retention.
- Supports future enterprise partnerships across insurance, finance and property services.

CHAPTER 17

FINANCIAL STRATEGY, FORECASTS & INVESTMENT PLAN

Building a Sustainable, High-Growth AI SaaS Business

Executive Summary

Zumaris has been designed as a **capital-efficient, AI-powered SaaS platform** that evolves into a high-margin digital ecosystem.

Unlike traditional marketplaces that depend almost entirely on transaction commissions, Zumaris adopts a phased financial strategy:

- **Phase 1:** Build recurring SaaS revenue through homeowner subscriptions.
- **Phase 2:** Introduce the marketplace to generate commission income.
- **Phase 3:** Launch AI-powered premium services.
- **Phase 4:** Expand into enterprise partnerships.
- **Phase 5:** Scale internationally across Europe.

This staged approach diversifies revenue, reduces dependency on any single income stream, and positions Zumaris for long-term sustainable growth.

The company seeks an initial investment of **£250,000**, which is expected to provide approximately **18–24 months of operational runway**, enabling the business to achieve product-market fit, validate its business model, and prepare for a larger Seed funding round.

17.1 Funding Requirement

Capital to Raise

£250,000

This investment is intended to finance:

- Completion of the MVP.
- AI platform development.
- Initial team recruitment.
- Product launch.
- Customer acquisition.
- Legal and regulatory compliance.
- Operational expenses.
- Working capital.

17.2 Use of Funds

Category	Amount	Percentage
Product Development	£80,000	32%
AI Development	£40,000	16%
Marketing & Customer Acquisition	£45,000	18%
Cloud Infrastructure & Software	£20,000	8%

Category	Amount	Percentage
Legal, GDPR & Intellectual Property	£15,000	6%
Operations & Administration	£20,000	8%
Working Capital Reserve	£30,000	12%
Total	**£250,000**	**100%**

17.3 Financial Philosophy

Zumaris follows five financial principles.

Sustainable Growth

Growth should be driven by customer value rather than excessive spending.

Recurring Revenue

Priority is given to Annual Recurring Revenue (ARR) through subscriptions.

High Gross Margin

Software and AI services provide attractive margins as the platform scales.

Capital Efficiency

Investment is directed toward long-term assets such as technology, AI and proprietary intellectual property.

Disciplined Spending

Every expenditure must contribute to measurable customer or platform value.

17.4 Revenue Streams

By Year Five, Zumaris expects revenue from multiple complementary sources.

Revenue Stream	Expected Contribution
Homeowner Subscriptions	30%
Tradesperson Subscriptions	20%
Marketplace Commissions	20%
AI Premium Services	10%
Enterprise APIs	8%
AI Website Builder™	5%
White-Label Solutions	4%
Reports & Certifications	3%

This diversified model enhances resilience and reduces dependency on any single market segment.

17.5 Revenue Forecast

Five-Year Financial Projection

Year	Revenue	Gross Margin	EBITDA
Year 1	£70,000	68%	-£170,000
Year 2	£350,000	74%	-£60,000
Year 3	£1,150,000	80%	£120,000
Year 4	£3,000,000	84%	£1,050,000
Year 5	£7,200,000	86%	£3,100,000

These projections are indicative and assume successful execution of the roadmap, market adoption and future funding where required.

17.6 Customer Growth Forecast

Homeowners

Year	Users
Year 1	2,500
Year 2	15,000
Year 3	60,000
Year 4	180,000
Year 5	500,000

Tradespeople

Year	Users
Year 1	0
Year 2	2,000
Year 3	10,000
Year 4	35,000
Year 5	100,000

Enterprise Clients

Year	Clients
Year 1	0
Year 2	2
Year 3	10
Year 4	30
Year 5	75

17.7 Subscription Forecast

Estimated Monthly Recurring Revenue (MRR):

Year	MRR
Year 1	£6,000
Year 2	£28,000
Year 3	£95,000
Year 4	£250,000
Year 5	£600,000

Estimated Annual Recurring Revenue (ARR):

Year	ARR
Year 1	£72,000
Year 2	£336,000
Year 3	£1.14M
Year 4	£3.0M
Year 5	£7.2M

17.8 Customer Acquisition Economics

Metric	Target
Customer Acquisition Cost (CAC)	< £60
Customer Lifetime Value (LTV)	> £900
LTV / CAC Ratio	> 15:1

Metric	Target
Monthly Churn	< 2%
Gross Margin	> 80%
Net Revenue Retention	> 120%

A high LTV/CAC ratio reflects the long-term value of customers who continue to build their Home Passport™ over many years.

17.9 Operating Expenses

Primary operating costs include:

- Engineering salaries.
- Cloud infrastructure.
- AI model usage.
- Marketing.
- Customer support.
- Legal and compliance.
- Product design.
- Sales and partnerships.

Operational efficiency will improve as subscription revenue scales.

17.10 Break-Even Analysis

Based on the current assumptions:

- Monthly break-even is expected between **Month 30 and Month 36**.
- Positive EBITDA is forecast during **Year Three**.

These milestones will depend on execution quality, customer adoption, pricing and funding availability.

17.11 Funding Roadmap

Stage	Target Raise	Objective
Founder Capital	£5,000	Initial validation

Stage	Target Raise	Objective
Pre-Seed	£250,000	MVP & Product-Market Fit
Seed	£1.5M	UK Scaling & Marketplace
Series A	£8–12M	European Expansion
Series B	£25M+	Enterprise & AI Platform

Each funding round is intended to support a clearly defined stage of growth.

17.12 Exit Strategy

Potential strategic acquirers may include:

- Global PropTech platforms.
- Home services marketplaces.
- Insurance technology companies.
- Mortgage technology providers.
- Smart home ecosystem providers.
- Large enterprise software companies.

An alternative long-term pathway could include continued independent growth supported by institutional investment.

17.13 Financial Risks

Key financial risks include:

- Slower-than-expected customer acquisition.
- Higher marketing costs.
- Delayed marketplace adoption.
- Increased cloud infrastructure expenses.
- Competitive pricing pressure.
- Additional regulatory costs.

Mitigation strategies include phased investment, diversified revenue streams, and disciplined cost control.

17.14 Value Creation Strategy

Zumaris aims to increase enterprise value through:

- Growth in Annual Recurring Revenue (ARR).
- Expansion of proprietary AI capabilities.
- Accumulation of unique property data.
- Strong customer retention.
- Intellectual property development.
- Strategic enterprise partnerships.
- Geographic expansion.

These drivers are expected to contribute more significantly to long-term valuation than short-term revenue alone.

17.15 Financial Milestones

Year 1

- Launch MVP.
- Acquire first paying customers.
- Validate Product-Market Fit.

Year 2

- Launch marketplace.
- Reach £300k+ annual revenue.

Year 3

- Achieve EBITDA profitability.
- Introduce enterprise products.

Year 4

- Expand into selected European markets.
- Scale AI services.

Year 5

- Exceed £7M annual revenue.
- Become a recognised AI platform for home ownership.

17.16 Chapter Summary

Zumaris has been designed as a financially disciplined, recurring-revenue technology business with multiple complementary income streams.

The phased financial strategy aligns investment with product maturity, reducing execution risk while creating long-term enterprise value. By focusing on subscriptions, AI-powered services and scalable enterprise offerings, the company aims to build a resilient and attractive financial profile for investors.

Key Investor Takeaways

- £250,000 will fund the business through MVP completion and market validation.
- The model prioritises high-margin recurring subscription revenue.
- Diversified income streams reduce financial risk.
- Break-even is targeted within approximately three years.
- The funding roadmap supports sustainable scaling and future investment rounds.

CHAPTER 18

RISK MANAGEMENT, CORPORATE GOVERNANCE & ESG

Building a Trusted, Secure and Sustainable AI Platform

Executive Summary

Every high-growth technology company faces uncertainty. The success of Zumaris will depend not only on innovation and customer adoption, but also on its ability to identify, assess and manage risks proactively. This chapter outlines the company's governance framework, enterprise risk management strategy, cybersecurity approach, regulatory compliance, Environmental, Social and Governance (ESG) commitments, and business continuity planning.

By embedding strong governance from the outset, Zumaris aims to build long-term trust with customers, investors, regulators and strategic partners.

18.1 Risk Management Philosophy

Risk is an inevitable part of innovation.

Zumaris does not seek to eliminate all risks; instead, it seeks to understand, prioritise and manage them through structured processes.

The company's approach is based on five principles:

- Early identification of risks.

- Continuous monitoring.
- Transparent reporting.
- Rapid response.
- Continuous improvement.

Risk management will be integrated into strategic planning and operational decision-making.

18.2 Enterprise Risk Categories

The company's risks are grouped into eight strategic categories.

Category	Description
Strategic	Competition, market adoption, business model
Financial	Funding, cash flow, revenue growth
Technology	Platform reliability, AI performance
Cybersecurity	Data breaches, cyber attacks
Legal & Regulatory	GDPR, AI regulation, consumer law
Operational	Team, suppliers, processes
Marketplace	Quality of tradespeople, customer trust
Reputation	Customer satisfaction, public perception

Each category will be reviewed quarterly by senior management.

18.3 Risk Register

Strategic Risks

Slow Customer Adoption

Risk

Customer growth is slower than forecast.

Likelihood

Medium

Impact

High

Mitigation

- Lean MVP launch.
- Continuous customer interviews.
- Product iteration.
- Referral programme.
- SEO-driven growth.
- Partnerships.

Strong Competition

Competitors may launch similar features.

Mitigation:

- Continuous innovation.
- AI differentiation.
- Home Passport™ ecosystem.
- Home Health Score™.
- Proprietary data models.
- Strong intellectual property protection.

Financial Risks

Insufficient Funding

Mitigation:

- Maintain 12–18 months runway.
- Stage hiring.
- Control operating expenses.
- Diversify funding sources.
- Revenue-first mindset.

Higher Marketing Costs

Mitigation:

- Focus on organic growth.
- Referral programmes.
- Community marketing.

- Content marketing.
- Strategic partnerships.

Technology Risks

Platform Downtime

Mitigation:

- Multi-region cloud infrastructure.
- Automated monitoring.
- Daily backups.
- High availability architecture.
- Disaster recovery procedures.

Target Availability:

99.9%

AI Performance

Potential issues:

- Incorrect recommendations.
- Hallucinations.
- Bias.
- Low accuracy.

Mitigation:

- Human oversight.
- Explainable AI.
- Continuous model evaluation.
- User feedback loops.
- Version control.

Cybersecurity Risks

Potential threats include:

- Phishing.
- Ransomware.
- Credential theft.
- Insider threats.
- API abuse.

- Malware.
- Denial-of-Service attacks.

Security measures include:

- Encryption at rest and in transit.
- Multi-factor authentication.
- Role-based access control.
- Regular penetration testing.
- Security monitoring.
- Incident response plans.
- Secure software development lifecycle (SSDLC).

Privacy Risks

As Zumaris stores sensitive homeowner data, privacy protection is fundamental.

The company will comply with:

- UK GDPR.
- EU GDPR (where applicable).
- Data Protection Act 2018.
- Future AI regulations.

Privacy principles include:

- Data minimisation.
- Explicit consent.
- Right to deletion.
- Data portability.
- Transparent privacy notices.
- Privacy by Design.

Marketplace Risks

Potential challenges include:

- Poor-quality contractors.
- Fraudulent accounts.
- Fake reviews.
- Missed appointments.
- Customer disputes.

Mitigation:

- Identity verification.
- Trust Score™.
- Verified reviews.
- Secure payment systems.
- Complaint resolution process.
- Continuous monitoring.

18.4 Cybersecurity Strategy

Customer trust depends on protecting sensitive property data.

Security strategy includes:

- ISO 27001 readiness.
- Secure cloud infrastructure.
- Encryption.
- Zero Trust principles.
- Continuous vulnerability scanning.
- Security awareness training.
- Annual penetration testing.
- Third-party security audits.

Cybersecurity will be treated as a strategic capability rather than an operational expense.

18.5 Business Continuity & Disaster Recovery

Zumaris will implement a Business Continuity Plan (BCP) to minimise service disruption.

Key components:

- Automated cloud backups.
- Multi-region redundancy.
- Incident response procedures.
- Recovery testing.
- Alternative communication channels.
- Supplier contingency plans.

Target Objectives:

Metric	**Target**
Recovery Time Objective (RTO)	< 4 hours
Recovery Point Objective (RPO)	< 30 minutes

18.6 Corporate Governance

Strong governance is essential for sustainable growth.

Initial Board Structure

Founder & CEO

Responsible for:

- Vision.
- Product strategy.
- Investor relations.
- Strategic partnerships.

Technology Advisor

Provides oversight of:

- AI.
- Architecture.
- Security.
- Scalability.

Finance Advisor

Responsible for:

- Financial planning.
- Investment readiness.
- Fundraising.
- Risk management.

Legal & Compliance Advisor

Responsible for:

- GDPR.
- Contracts.
- Intellectual property.
- Regulatory compliance.

As the company grows, independent non-executive directors will be appointed to strengthen governance and strategic oversight.

18.7 ESG Strategy

Environmental, Social and Governance (ESG) principles are embedded into Zumaris' long-term strategy.

Environmental

Zumaris contributes to sustainability by:

- Encouraging preventative maintenance.
- Extending the lifespan of homes and appliances.
- Reducing unnecessary replacements.
- Supporting paperless documentation.
- Promoting energy efficiency.
- Encouraging responsible property management.

Long-term ambition:

Enable smarter, lower-carbon home ownership.

Social

Zumaris aims to create positive social impact by:

- Supporting independent tradespeople.
- Helping homeowners protect their largest asset.
- Increasing digital inclusion through intuitive technology.
- Improving home safety.
- Reducing financial stress caused by unexpected repairs.
- Encouraging trusted local communities.

Governance

The company commits to:

- Transparent leadership.
- Ethical AI.
- Data privacy.
- Regulatory compliance.
- Diversity and inclusion.
- Responsible decision-making.
- Accountability to stakeholders.

18.8 Ethical AI Framework

Zumaris recognises that Artificial Intelligence must be trustworthy.

The company adopts the following principles:

- Fairness.
- Transparency.
- Human oversight.
- Accountability.
- Security.
- Privacy.
- Explainability.
- Continuous monitoring.

AI recommendations will assist—not replace—professional judgement.

18.9 Intellectual Property Protection

The company's competitive advantage relies on protecting its intellectual property.

Key assets include:

- Zumaris® brand.
- Home Passport™.
- Home Health Score™.
- Home DNA™.
- HomeGraph™.
- AI Property Assistant™.
- AI Website Builder™.
- Trust Score™.

Protection strategy:

- UK trademarks.
- EU trademarks.
- Copyright.
- Confidentiality agreements.
- Trade secrets.
- Patent assessments where appropriate.

18.10 Compliance Roadmap

As Zumaris grows, it intends to work towards:

- Cyber Essentials Plus.
- ISO 27001.
- SOC 2 Type II (for enterprise customers).
- ICO registration.
- Accessibility compliance (WCAG).
- Ongoing GDPR compliance.

These certifications will support enterprise sales and strengthen customer trust.

18.11 Key Risk Indicators (KRIs)

Management will monitor:

- Customer churn rate.
- Security incidents.
- Platform uptime.
- Customer complaints.
- AI accuracy metrics.
- Average response time.
- Regulatory issues.
- Cash runway.
- Customer acquisition cost.
- Employee retention.

KRIs will be reviewed monthly and reported to the Board.

18.12 Chapter Summary

Zumaris recognises that sustainable growth depends on more than innovation. By embedding robust governance, disciplined risk management, cybersecurity, privacy and ESG principles from the company's earliest stages, the business aims to earn the trust of homeowners, tradespeople, enterprise partners and investors.

This proactive approach not only reduces operational risk but also positions Zumaris as a responsible, investment-ready technology company capable of scaling across the UK and Europe.

Key Investor Takeaways

- Comprehensive enterprise risk framework from day one.
- Strong focus on cybersecurity and data protection.
- Governance structure designed for scalable growth.
- ESG principles integrated into the business model.
- Clear roadmap towards internationally recognised compliance standards.

CHAPTER 19

VISION 2035

Building the World's Digital Infrastructure for Home Ownership

The Future of Every Home Starts Here

Executive Summary

Zumaris was not created simply to help homeowners find trusted tradespeople or organise property documents. Its long-term vision is far more ambitious. Zumaris aims to become the **digital operating system for home ownership**, connecting people, properties, service providers, financial institutions and intelligent technologies into a single trusted ecosystem.

Just as financial technology transformed banking and health technology transformed patient care, Zumaris seeks to redefine how homes are managed, maintained and protected.

By 2035, the company aspires to become the global reference platform for digital home ownership.

19.1 Our Vision

Vision Statement

To become the world's most trusted AI platform for home ownership, empowering every homeowner with intelligent insights, trusted services and a lifelong digital identity for every property.

This vision extends beyond software. It represents a new digital infrastructure for one of the world's largest and most valuable asset classes: residential property.

19.2 Our Mission

Mission Statement

To simplify, protect and improve home ownership by combining Artificial Intelligence, trusted data and exceptional user experiences into one connected platform.

The mission reflects three core promises:

- Simplify home management.
- Protect property value.
- Improve long-term quality of life.

19.3 Our Purpose

Every family depends on a safe, well-maintained home.

Yet millions of homeowners still rely on paper documents, spreadsheets, emails and memory to manage one of the most valuable assets they will ever own.

Zumaris exists to remove that complexity.

Our purpose is simple:

Helping every homeowner make better decisions with confidence.

19.4 Our Long-Term Ambition

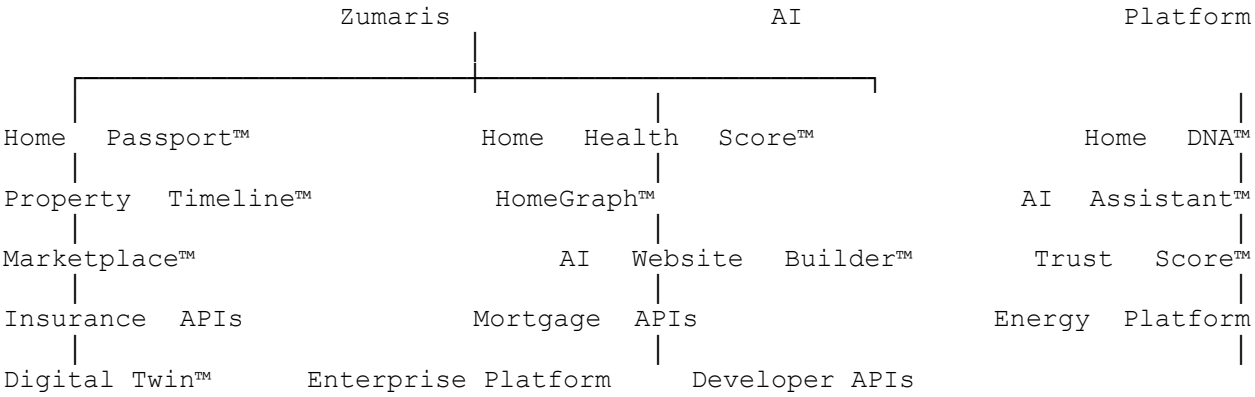

By 2035, Zumaris aims to serve:

- Millions of homeowners.
- Hundreds of thousands of tradespeople.
- Thousands of property businesses.
- Insurance companies.
- Mortgage providers.
- Estate agencies.
- Housing associations.
- Government organisations.

The platform will become a trusted digital layer across the property ecosystem.

19.5 The Zumaris Ecosystem

By 2035, the ecosystem is expected to include:

Each product reinforces the others, creating strong network effects and increasing customer lifetime value.

19.6 The Future Home Experience

Imagine a homeowner opening the Zumaris app in 2035.

The AI Assistant greets them:

"Good morning. Your home is in excellent condition with a Home Health Score™ of 94. The roof inspection is due in three months, your boiler warranty expires next year, and based on energy prices, installing additional loft insulation could save approximately £280 annually. Shall I arrange quotations from trusted local professionals?"

This is not just software.

It is intelligent home ownership.

19.7 International Expansion Strategy

The company will expand through carefully planned phases.

Phase 1

United Kingdom

Focus:

Product-market fit

Phase 2

Ireland

Netherlands

Germany

France

Phase 3

Nordic Countries

Spain

Italy

Belgium

Austria

Phase 4

United States

Canada

Australia

Phase 5

Middle East

Singapore

Japan

Global partnerships

Expansion will prioritise markets with high homeownership rates, strong digital adoption and supportive regulatory environments.

19.8 Future Technologies

Zumaris will continuously invest in emerging technologies.

Potential innovations include:

Digital Twin™

A living digital replica of every property.

Computer Vision

Automatic detection of maintenance issues from photographs and videos.

IoT Integration

Real-time monitoring using smart home sensors.

Predictive AI

Forecasting maintenance needs years in advance.

Climate Intelligence

Assessing climate risks such as flooding, heat and storms.

Robotics Integration

Future support for robotic inspection and maintenance technologies.

Voice AI

Natural conversations with the AI Property Assistant.

Autonomous Property Management

AI coordinating maintenance schedules, contractors and compliance with minimal user intervention.

19.9 Industry Transformation

Today:

Homeowners react to problems.

Tomorrow:

Homeowners prevent problems.

Today:

Property information is fragmented.

Tomorrow:

Every home has a trusted digital identity.

Today:

Maintenance is unpredictable.

Tomorrow:

Maintenance becomes data-driven.

Today:

Property ownership is stressful.

Tomorrow:

Property ownership becomes intelligent.

19.10 Success Beyond Financial Performance

Zumaris measures success through multiple dimensions.

Customer Success

- Higher customer satisfaction.
- Reduced maintenance stress.
- Better property outcomes.

Business Success

- Sustainable recurring revenue.
- Strong customer retention.
- Global expansion.

Social Success

- Safer homes.
- Better living standards.
- Stronger local businesses.

Environmental Success

- Lower carbon emissions.
- Longer building lifespans.
- Reduced material waste.

19.11 Founder Vision

When we began designing Zumaris, we did not ask:

"How can we build another marketplace?"

Instead, we asked:

"Why is one of the most valuable assets people own still managed with folders, emails and memory?"

That question led to a much larger vision.

We believe every home deserves the same level of digital intelligence that people already expect in banking, healthcare and mobility.

Our goal is not to replace human expertise.

Our goal is to empower homeowners with better information, trusted professionals and intelligent guidance throughout the lifetime of their property.

Zumaris is not building another application.

We are building the digital infrastructure for the future of home ownership.

19.12 Why Investors Should Believe

The opportunity combines several powerful trends:

- Artificial Intelligence.
- Property Technology (PropTech).
- SaaS subscriptions.
- Marketplace economics.
- Digital identity.

- Predictive analytics.
- Climate resilience.
- Smart homes.

Few companies operate at the intersection of all these markets. Zumaris is uniquely positioned to create long-term value through proprietary data, AI capabilities and trusted customer relationships.

19.13 The Legacy We Aspire to Build

Our ambition is not only to build a successful company. We aspire to create a platform that future generations recognise as the standard for responsible home ownership. Just as digital banking transformed financial management, Zumaris aims to transform the way people care for their homes. If successful, every improvement made by homeowners today will contribute to safer homes, more sustainable communities and a stronger property ecosystem tomorrow.

Final Message

Every home has a story.

Every repair, every improvement, every decision becomes part of that story.

Zumaris ensures that story is never lost.

Chapter Summary

Vision without execution remains an aspiration.

Execution without vision limits potential.

Zumaris combines a long-term vision with a practical, phased strategy to build a trusted AI platform that supports homeowners throughout the entire lifecycle of property ownership.

The company seeks not only to create commercial success but also to redefine how homes are managed, maintained and protected in the digital age.

Key Investor Takeaways

- A clear vision extending well beyond the initial product.
- A scalable platform strategy built around proprietary AI and data.
- Multiple expansion opportunities across industries and geographies.
- Strong alignment with long-term trends in AI, PropTech and digital infrastructure.

- A mission capable of generating lasting customer trust and enterprise value.
